Project Implementation In Ethiopia An Assessment For:

Evaluating the impact of multi-intervention development projects: The case of Ethiopia's community-based integrated natural resources management project Abate, Gashaw Tadesse, de Brauw, Alan, Minot, Nicholas, Vos, Rob, Warner, James M., Wassie, Solomon B., Yang, Shijie, 2021-12-09 This paper provides a quantitative impact assessment of the community based integrated natural resources management project CBINReMP in the Lake Tana region in Ethiopia during 2011-2019. By promoting greater community participation, the CBINReMP provided support to watershed communities for the restoration of degraded soils and water sources, rehabilitation of forests, as well as in obtaining access to secure land titles and practices for climate change adaptation. The project further provided support towards diversification of incomes in off-farm activities and incentives for women's empowerment and youth employment. This way, the project aimed to support rural livelihoods through improvements in household incomes, dietary diversity, agricultural productivity, and resilience to climatic shocks among other livelihood objectives. To assess the project's impacts, the study had to deal with numerous methodological complications owing to, as the project's nature and design. The lack of a proper baseline survey, incomplete information about targeted watershed communities, and often lack of clear distinction lines between the project's interventions and support provided to communities through other mechanisms made it hard to identify the true impact of the CBINReMP. Four additional challenges had to be faced: possible selection biases because of non-random placement, targeting of the project, self-selection of beneficiaries into receiving the project, possible spatial spill-over effects of project benefits to non-treatment communities, and the project's phased rollout. A propensity score matching procedure was adopted to assess the CBINReMP's impacts by comparing treatment beneficiary and control groups' outcomes related to the livelihood indicators listed above. This paper discusses how the mentioned complications were addressed to provide a sound assessment of the project's true impacts. While certain limitations remain, the key finding that can be drawn with confidence is that the CBINReMP had only very limited, quantitatively verifiable impact on rural livelihoods. It seems to have contributed to higher household incomes and some greater dietary diversity, but only where the project managed greater community participation. However, even for those beneficiaries, livelihood conditions had not become significantly more productive, diversified, resilient, or sustainable than those of the comparison group. The paper ends with recommendations on how to avoid methodological obstacles through better design of the M-E framework for multi-intervention, community-based projects.

Final evaluation of "Strengthening institutionalized subnational coordination structures and harmonization mechanisms" in Ethiopia Food and Agriculture Organization of the United Nations, 2020-04-01 Recurrent droughts in Ethiopia have been contributing to chronic food insecurity, deterioration of livelihoods, and weakening capacity of communities to withstand future shocks. Following the 2011 food crisis in the Horn of Africa, building resilience became a priority agenda for the international community to move from the division of emergency and development programming to a

more holistic and complementary approach for addressing the root cause of disaster risk and vulnerability factors of recurrent drought. The project implemented by FAO between 2015 and 2019 aimed to support and reinforce existing coordination mechanisms at the regional states and zonal administration levels and enhance linkages between short term humanitarian interventions and long term development initiatives. The evaluation found that the project was highly relevant to the current context in Ethiopia where preparedness and longer term resilience have become priority areas of focus for all actors in humanitarian and development initiatives. Resilience coordination mechanisms have been strengthened at regional levels. However, the sustainability of these efforts will depend on the commitment of Government and partners to continue strengthening the existing coordination mechanisms and their ability to convene development partners.

Public Finance and Economic Growth in Developing Countries Stephen Peterson, 2015-04-24. Public finance is crucial to a country's economic growth, yet successful reform of public finances has been rare. Ethiopia is an example of a country that undertook comprehensive reform of its core financial systems independent of the IMF and the World Bank and successfully transformed itself into one of the fastest growing economies in Africa. With Ethiopia's twelve year reform as its guiding case study, this book presents new analytical frameworks to help governments develop better financial reforms. It shows in detail how four core financial systems: budgeting, accounting, planning, and financial information systems, can be reformed. One of the principal findings presented is that governments must establish basic public financial administration before moving to more sophisticated public financial management. Other key findings include the identification of four strategies of reform: recognize, improve, change, and sustain; the centrality of ongoing learning to the process of reform; and the importance of government ownership of reform. This book will be of interest to researchers and policymakers concerned with public finance, developmental economics, and African studies.

Indigenous Peoples in the World Bank Group's Practice Silvia Solidoro, 2025-11-16. This book explores whether the World Bank Group, despite not being formally bound by international human rights law, operates in accordance with it when financing investment projects involving indigenous peoples who are often among the most impacted. The inquiry proceeds along two principal strands grounded in the distinction between operations targeting public and private sector recipients. First, it traces the evolution of the World Bank Group's policies on indigenous peoples which are binding on its staff and once incorporated into loan agreements on financing recipients as well. Second, it examines the interpretative practice of the organization's Independent Accountability Mechanisms which review compliance with these policies throughout the project cycle. It finds that the policies have evolved alongside key developments in international law and that the Independent Accountability Mechanisms consistently reference both hard and soft international legal instruments in their assessments. Building on these findings, the book reconsiders whether the World Bank Group may in fact be subject to international human rights obligations. Departing from traditional deductive reasoning, it adopts an inductive approach grounded in institutional practice. It argues that the World Bank Group, as an international

legal actor is bound by an emerging body of rules and principles of general international law and calls for a reassessment of the organization's role in shaping the human rights discourse on indigenous peoples

Organizational and Institutional Issues in Climate Change Adaptation and Risk Management Catherine Ragasa, Yan Sun, Elizabeth Bryan, Caroline Abate, Atlaw Alemu, Mahamadou Namori Keita, 2013-07-17

Climate change places demand on existing governance structures to reform and work more effectively than in the past. In response, greater attention to and funding for climate change adaptation including the efforts of National Adaptation Programmes of Action (NAPAs), the Least Developed Country Fund, the Special Climate Change Fund, the Adaptation Fund, and the E.U. Global Climate Change Alliance provide an opportunity for institutional, organizational, and human capacity strengthening. This study was conducted to explore the challenges and opportunities for building human, organizational, and institutional capacity for more effective climate change adaptation in developing countries. It is part of a larger research project titled "Enhancing Women's Assets to Manage Risk under Climate Change: Potential for Group-Based Approaches" which is being conducted to help organizations better understand ways in which development projects can assist rural households in adapting to and managing the effects of climate change. This report provides some reflections and insights on the level of awareness, practices, and organizational and institutional issues being faced by countries as they adapt to climate change based on interviews with 87 practitioners working in government agencies, local organizations, international organizations, and think tanks reporting involvement in climate change adaptation. Data were collected in Bangladesh, Ethiopia, Kenya, and Mali using both an e-survey platform and face-to-face interviews. Responses reveal active work within these organizations on climate change adaptation and emphasize their important role in the countries' efforts to address and adapt to climate change. Responses also reveal strong awareness among these organizations of different aspects of climate change adaptation along the different stages in a climate change adaptation project cycle, which may be a reflection of the active discussions and awareness campaigns during NAPA development in these countries. However, despite the awareness and presence of national strategies and action plans, there seem to be no explicit and clearly defined policy and strategy within these organizations outlining their role in and contribution to the national and collective efforts, and more importantly, no explicit and measurable targets and monitoring and evaluation (M&E) system to track progress and outcomes over time. Reported capacity gaps can be grouped into two categories: training needs and institutional challenges. In many organizations, there is limited awareness of and emphasis on the need for participation of target groups and beneficiaries during design and planning of climate change adaptation projects. In addition, many respondents reported a need for greater attention to issues related to profitability, financial sustainability, and market access from climate change project design to M&E. Finally, respondents emphasized that climate change projects should pay greater attention to gender, social, political, and cultural issues in their design and implementation. Reflections of respondents also highlighted the need for organizational capacity strengthening for those local organizations working in and providing

services to rural communities and for promoting a culture of impact and M E within these organizations in addition to the reported training needs in climate change management and in gender and social analysis While this report provides some insights further empirical analyses are needed to discover more details on strategies that could help trigger mind set and organizational culture change and to capture the complexity of organizational and institutional issues hindering climate change adaptation efforts that aim at reducing vulnerability and contributing to development outcomes
