Motion Planning for Humanoid Robots Kensuke Harada, Eiichi Yoshida, Kazuhito Yokoi, 2010-08-12 Research on humanoid robots has been mostly with the aim of developing robots that can replace humans in the performance of certain tasks Motion planning for these robots can be quite difficult due to their complex kinematics dynamics and environment It is consequently one of the key research topics in humanoid robotics research and the last few years have witnessed considerable progress in the field Motion Planning for Humanoid Robots surveys the remarkable recent advancement in both the theoretical and the practical aspects of humanoid motion planning Various motion planning frameworks are presented in Motion Planning for Humanoid Robots including one for skill coordination and learning and one for manipulating and grasping tasks The problem of planning sequences of contacts that support acyclic motion in a highly constrained environment is addressed and a motion planner that enables a humanoid robot to push an object to a desired location on a cluttered table is described The main areas of interest include whole body motion planning task planning biped gait planning and sensor feedback for motion planning Torque level control of multi contact behavior autonomous manipulation of moving obstacles and movement control and planning architecture are also covered Motion Planning for Humanoid Robots will help readers to understand the current research on humanoid motion planning It is written for industrial engineers advanced undergraduate and postgraduate students

Sensing and Control for Autonomous Vehicles Thor I. Fossen, Kristin Y. Pettersen, Henk Nijmeijer, 2017-05-26 This edited volume includes thoroughly collected on sensing and control for autonomous vehicles Guidance navigation and motion control systems for autonomous vehicles are increasingly important in land based marine and aerial operations Autonomous underwater vehicles may be used for pipeline inspection light intervention work underwater survey and collection of oceanographic biological

data Autonomous unmanned aerial systems can be used in a large number of applications such as inspection monitoring data collection surveillance etc At present vehicles operate with limited autonomy and a minimum of intelligence There is a growing interest for cooperative and coordinated multi vehicle systems real time re planning robust autonomous navigation systems and robust autonomous control of vehicles Unmanned vehicles with high levels of autonomy may be used for safe and efficient collection of environmental data for assimilation of climate and environmental models and to complement global satellite systems The target audience primarily comprises research experts in the field of control theory but the book may also be beneficial for graduate students

Adaptive State × Time Lattices: A Contribution to Mobile Robot Motion Planning in Unstructured Dynamic Environments Petereit, Janko,2017-01-20 Mobile robot motion planning in unstructured dynamic environments is a challenging task Thus often suboptimal methods are employed which perform global path planning and local obstacle avoidance separately This work introduces a holistic planning algorithm which is based on the concept of state

Journal of Biomechanical Engineering ,2009 *Proceedings of the Seventh SIAM International Conference on Data Mining* Chid Apte,Bing Liu,Srinivasan Parthasarathy,2007 The Seventh SIAM International Conference on Data Mining SDM 2007 continues a series of conferences whose focus is the theory and application of data mining to complex datasets in science engineering biomedicine and the social sciences These datasets challenge our abilities to analyze them because they are large and often noisy Sophisticated highperformance and principled analysis techniques and algorithms based on sound statistical foundations are required Visualization is often critically important tuning for performance is a significant challenge and the appropriate levels of abstraction to allow end users to exploit sophisticated techniques and understand clearly both the constraints and interpretation of results are still something of an open question
