## **Database Design Implementation Edward Sciore:**

*Database Design and Implementation* Edward Sciore, 2009 This title takes software developers through database systems while covering the traditional database system concepts from a systems perspective The chapters are organized according to the components of a database starting from low level disk access and ending at the query planner

*Database Design and Implementation* Edward Sciore, 2020-02-27 This textbook examines database systems from the viewpoint of a software developer This perspective makes it possible to investigate why database systems are the way they are It is of course important to be able to write queries but it is equally important to know how they are processed We e g don t want to just use JDBC we also want to know why the API contains the classes and methods that it does We need a sense of how hard is it to write a disk cache or logging facility And what exactly is a database driver anyway The first two chapters provide a brief overview of database systems and their use Chapter 1 discusses the purpose and features of a database system and introduces the Derby and SimpleDB systems Chapter 2 explains how to write a database application using Java It presents the basics of JDBC which is the fundamental API for Java programs that interact with a database In turn Chapters 3 11 examine the internals of a typical database engine Each chapter covers a different database component starting with the lowest level of abstraction the disk and file manager and ending with the highest the JDBC client interface further the respective chapter explains the main issues concerning the component and considers possible design decisions As a result the reader can see exactly what services each component provides and how it interacts with the other components in the system By the end of this part s he will have witnessed the gradual development of a simple but completely functional system The remaining four chapters then focus on efficient query processing and focus on the sophisticated techniques and algorithms that can replace the simple design choices described earlier Topics include indexing sorting intelligent buffer usage and query optimization This text is intended for upper level undergraduate or beginning graduate courses in Computer Science It assumes that the reader is comfortable with basic Java programming advanced Java concepts such as RMI and JDBC are fully explained in the text The respective chapters are complemented by end of chapter readings that discuss interesting ideas and research directions that went unmentioned in the text and provide references to relevant web pages research articles reference manuals and books Conceptual and programming exercises are also included at the end of each chapter Students can apply their conceptual knowledge by examining the SimpleDB a simple but fully functional database system created by the author and provided online code and modifying it

Delobel,Michael Kifer,Yoshifumi Masunaga,1991 This volume is the proceedings of the Second International Conference on Deductive and Object Oriented Databases DOOD During the last decade deductive and object oriented systems have received a great deal of attention but for the most part these two fields were evolving independently of each other Today there is a large body of work suggesting that the deductive and object oriented paradigms complement each other The object oriented paradigm is characterized by its view of the data whereby information is grouped around objects with complex internal structure accessed via methods The declarative paradigm is centered around the idea that data manipulation must be done through a declarative logic based

language It is hoped that these two aspects brought together in one system will provide an integrated framework for a new database technology The DOOD conference brings together researchers and developers in the fields of deductive and object oriented databases to stimulate technical discussion and accelerate the integration of the two technologies This volume contains 28 contributed papers selected from 98 submissions and two invited papers by world renowned researchers
