Scientists have conducted experiments on many different animals to determine whether there are any relationships between body size and metabolic rate. They use a variety of different experimental techniques to measure metabolic rate. One technique is to measure the amount of oxygen that an animal uses in a given period of time. This is done by measuring the amount of oxygen that is consumed by the animal. The amount of oxygen that is consumed is a measure of the animal's metabolic rate. The amount of oxygen that is consumed is also a measure of the animal's energy expenditure. The amount of oxygen that is consumed is also a measure of the animal's energy intake. The amount of oxygen that is consumed is also a measure of the animal's energy output.
