Intelligent Robotics and Applications Honghai Liu, Han Ding, Zhenhua Xiong, Xiangyang Zhu, 2010-11-10 The market demand for skills knowledge and adaptability have positioned robotics to be an important field in both engineering and science One of the most highly visible applications of robotics has been the robotic automation of many industrial tasks in factories In the future a new era will come in which we will see a greater success for robotics in non industrial environments In order to anticipate a wider deployment of intelligent and autonomous robots for tasks such as manufacturing healthcare entertainment search and rescue surveillance exploration and security missions it is essential to push the frontier of robotics into a new dimension one in which motion and intelligence play equally important roles The 2010 International Conference on Intelligent Robotics and Applications ICIRA 2010 was held in Shanghai China November 10-12 2010 The theme of the conference was Robotics Harmonizing Life a theme that reflects the ever growing interest in research development and applications in the dynamic and exciting areas of intelligent robotics These volumes of Springer's Lecture Notes in Artificial Intelligence and Lecture Notes in Computer Science contain 140 high quality papers which were selected at least for the papers in general sessions with a 62% acceptance rate Traditionally ICIRA 2010 holds a series of plenary talks and we were fortunate to have two such keynote speakers who shared their expertise with us in diverse topic areas spanning the range of intelligent robotics and application

activities **Probability, Statistics, and Random Processes for Electrical Engineering** Alberto Leon-Garcia,2008 While helping students to develop their problem solving skills the author motivates students with practical applications from various areas of ECE that demonstrate the relevance of probability theory to engineering practice **IEE Proceedings**,2006 *Introduction to Modeling and Simulation with MATLAB® and Python* Steven I. Gordon,Brian Guilfoos,2017-07-12 Introduction to Modeling and Simulation with MATLAB and Python is intended for students and professionals in science social science and engineering that wish to learn the principles of computer modeling as well as basic programming skills The book content focuses on meeting a set of basic modeling and simulation competencies that were developed as part of several National Science Foundation grants Even though computer science students are much more expert programmers they are not often given the opportunity to see how those skills are being applied to solve complex science and engineering problems and may also not be aware of the libraries used by scientists to create those models The book interleaves chapters on modeling concepts and related exercises with programming concepts and exercises The authors start with an introduction to modeling and its importance to current practices in the sciences and engineering They introduce each of the programming environments and the syntax used to represent variables and compute mathematical equations and functions As students gain more programming expertise the authors return to modeling concepts providing starting code for a variety of exercises where students add additional code to solve the problem and provide an analysis of the outcomes In this way the book builds both modeling and programming expertise with a just in time approach so that by the end of the book students can take on relatively simple modeling example on their own Each chapter is supplemented with references to additional reading tutorials and exercises that guide students to additional help and allows them to practice both their programming and analytical modeling skills In addition each of the programming related chapters is divided into two parts one for MATLAB and one for Python In these chapters the authors also refer to additional online tutorials that students can use if they are having difficulty with any of the topics The book culminates with a set of final project exercise suggestions that incorporate both the modeling and programming skills provided in the rest of the volume Those projects could be undertaken by individuals or small groups of students The companion website at <http://www.intromodeling.com> provides updates to instructions when there are substantial changes in software versions as well as electronic copies of exercises and the related code The website also offers a space where people can suggest additional projects they are willing to share as well as comments on the existing projects and exercises throughout the book Solutions and lecture notes will also be available for qualifying instructors
