Field-Programmable Logic and Applications: Reconfigurable Computing Is Going Mainstream Manfred Glesner, Peter Zipf, Michel Renovell, 2003-08-02 This book constitutes the refereed proceedings of the 12th International Conference on Field Programmable Logic and Applications FPL 2002 held in Montpellier France in September 2002 The 104 revised regular papers and 27 poster papers presented together with three invited contributions were carefully reviewed and selected from 214 submissions The papers are organized in topical sections on rapid prototyping FPGA synthesis custom computing engines DSP applications reconfigurable fabrics dynamic reconfiguration routing and placement power estimation synthesis issues communication applications new technologies reconfigurable architectures multimedia applications FPGA based arithmetic reconfigurable processors testing and fault tolerance crypto applications multitasking compilation techniques etc

Design Automation for Physical Synthesis of VLSI Circuits and FPGAs Cristinel Ababei, 2004 **Integrated Placement and Routing for VLSI Layout Synthesis and Optimization** University of California, Berkeley. Computer Science Division, Ping-San Tzeng, 1992 This dissertation investigates ways to integrate various VLSI layout algorithms via carefully designed integrated data structures Such an integrated approach can achieve better overall results by iterating non sequentially among the various algorithms in a demand driven manner The shared data structure which is modified incrementally by all the different algorithms serves as an efficient communication medium between them This approach has resulted in several new prototype tools including a new placement program that combines wire length optimization with a new 2 D compaction algorithm a new area routing approach that employs hierarchical rip up and reroute techniques in an integrated global and detailed routing environment and also a system that integrates the area router with a placement adjustment algorithm This integrated system can iterate automatically between area routing and placement adjustment phases to generate optimized results for macro cell problems with over the cell routing *Digital Design and Fabrication* Vojin G. Oklobdzija, 2017-12-19 In response to tremendous growth and new technologies in the semiconductor industry this volume is organized into five information rich sections Digital Design and Fabrication surveys the latest advances in computer architecture and design as well as the technologies used to manufacture and test them Featuring contributions from leading experts the book also includes a new section on memory and storage in addition to a new chapter on nonvolatile memory technologies Developing advanced concepts this sharply focused book Describes new technologies that have become driving factors for the electronic industry Includes new information on semiconductor memory circuits whose development best illustrates the phenomenal progress encountered by the fabrication and technology sector Contains a section dedicated

to issues related to system power consumption Describes reliability and testability of computer systems Pinpoints trends and state of the art advances in fabrication and CMOS technologies Describes performance evaluation measures which are the bottom line from the user s point of view Discusses design techniques used to create modern computer systems including high speed computer arithmetic and high frequency design timing and clocking and PLL and DLL design **Twelfth International Conference on VLSI Design** VLSI Society of India,IEEE Circuits and Systems Society,1999 The proceedings of the January 1999 conference consist of 103 papers 11 talks and six tutorials The papers are grouped under the headings of TCAD to ECAD low power testing co design and synthesis analog design multi valued logic verification digital signal processor DSP logic synthesis Proceedings of the ...
