

Write a procedure to generate random numbers between 0 and 1, given a randomizing device that generates random integers in the range 1 to n .

My Solution: `Random(0,1) = rand(n)`

We have a random device that generates random integers in the range 1 to n . We want to generate random numbers in the range 0 to 1 . We can do this by generating random integers in the range 1 to n and then dividing by n . This is a simple solution.

Write a procedure to generate random numbers between 0 and 1, given a randomizing device that generates random integers in the range 1 to n . Assume that the device generates random integers in the range 1 to n with equal probability.

Random(0,1) = rand(n)

My Solution: `rand(n)`

Write a procedure to generate random numbers between 0 and 1, given a randomizing device that generates random integers in the range 1 to n .

```
def rand(n):  
    r = random.randint(1, n)  
    return r/n
```

My Solution: `rand(n)`

`def rand(n): return random.randint(1, n)/n`

Write a procedure to generate random numbers between 0 and 1, given a randomizing device that generates random integers in the range 1 to n .

```
def rand(n):  
    r = random.randint(1, n)  
    return r/n
```

Algorithms Umesh Vazirani, Algorithms, Christos H. Papadimitriou, Algorithms, Sanjoy Dasgupta, Algorithms, 2006-09-13 This text extensively class tested over a decade at UC Berkeley and UC San Diego explains the fundamentals of algorithms in a story line that makes the material enjoyable and easy to digest Emphasis is placed on understanding the crisp mathematical idea behind each algorithm in a manner that is intuitive and rigorous without being unduly formal Features include The use of boxes to strengthen the narrative pieces that provide historical context descriptions of how the algorithms are used in practice and excursions for the mathematically sophisticated Carefully chosen advanced topics that can be skipped in a standard one semester course but can be covered in an advanced algorithms course or in a more leisurely two semester sequence An accessible treatment of linear programming introduces students to one of the greatest achievements in algorithms An optional chapter on the quantum algorithm for factoring provides a unique peephole into this exciting topic In addition to the text DasGupta also offers a Solutions Manual which is available on the Online Learning Center Algorithms is an outstanding undergraduate text equally informed by the historical roots and contemporary applications of its subject Like a captivating novel it is a joy to read Tim Roughgarden Stanford University *Intelligent Problem Solving. Methodologies and Approaches* Rasiyah Logananthara, Günther Palm, Moonis Ali, 2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area **Computational Intelligence for Modelling, Control & Automation** Masoud Mohammadian, 1999 This edited Book is dedicated to the theory and applications of Evolutionary Computation and Fuzzy Logic for Intelligent Control Knowledge Acquisition and Information Retrieval The book consists of 86 selected research papers from the 1999
