creation of a new modeling language IFML discussion of modeling issues and approaches in specific domains like business process modeling user interaction modeling and enterprise architecture complete revision of examples figures and text for improving readability understandability and coherence better formulation of definitions dependencies between concepts and ideas addition of a complete index of book content In addition to the contents of the book more resources are provided on the book s website <http://www.mdse-book.com> including the examples presented in the book Electronic Engineering and Information Science Dongxing Wang,2015-06-11 The International Conference of Electronic Engineering and Information Science 2015 ICEEIS 2015 was held on January 17 18 2015 Harbin China This proceedings volume assembles papers from various researchers engineers and educators engaged in the fields of electronic engineering and information science The papers in this proceedings The LATEX Graphics Companion Michel Goossens,Sebastian Rahtz ,Denis Roegel,Herbert Voß,Frank Mittelbach,2022-01-14 The LATEX typesetting System remains a popular choice for typesetting a wide variety of documents from papers journal articles and presentations to books especially those that include technical text or demand high quality composition This book is the most comprehensive guide to making illustrations in LATEX documents and it has been completely revised and expanded to include the latest developments in LATEX graphics The authors describe the most widely used packages and provide hundreds of solutions to the most commonly encountered LATEX illustration problems This book will show you how to Incorporate graphics files into a LATEX document Program technical diagrams using several languages including METAPOST PSTricks and XY pic Use color in your LATEX projects including presentations Create special purpose graphics such as high quality music scores and games diagrams Produce complex graphics for a variety of scientific and engineering disciplines New to this edition Updated and expanded coverage of the PSTricks and METAPOST languages Detailed explanations of major new packages for graphing and 3 D figures Comprehensive description of the xcolor package Making presentations with the beamer dass The latest versions of gaming and scientific packages There are more than 1100 fully tested examples that illustrate the text and solve graphical problems and tasks all ready to run All the packages and examples featured in this book are freely downloadable from the Comprehensive TEX Archive Network CTAN The LATEX Graphics Companion Second Edition is more than ever an indispensable reference for anyone wishing to incorporate graphics into LATEX As befits the subject the book has been typeset with LATEX in a two color design

Automatic Parallelization Christoph W. Kessler,2012-12-06 Distributed memory multiprocessing systems DMS such as Intel s hypercubes the Paragon Thinking Machine s CM 5 and the Meiko Computing Surface have rapidly gained user acceptance and promise to deliver the computing power required to solve the grand challenge problems of Science and Engineering These machines are relatively inexpensive to build and are potentially scalable to large numbers of processors However they are difficult to program the non uniformity of the memory which makes local accesses much faster than the transfer of non local data via message passing operations implies that the locality of algorithms must be exploited in order to

achieve acceptable performance The management of data with the twin goals of both spreading the computational workload and minimizing the delays caused when a processor has to wait for non local data becomes of paramount importance When a code is parallelized by hand the programmer must distribute the program s work and data to the processors which will execute it One of the common approaches to do so makes use of the regularity of most numerical computations This is the so called Single Program Multiple Data SPMD or data parallel model of computation With this method the data arrays in the original program are each distributed to the processors establishing an ownership relation and computations defining a data item are performed by the processors owning the data
