Raspberry Pi OS System Administration with systemd and Python Robert M. Koretsky,2023-12-26 The second in a new series exploring the basics of Raspberry Pi Operating System administration this installment builds on the insights provided in Volume 1 to provide a compendium of easy to use and essential Raspberry Pi OS system administration for the novice user with specific focus on Python and Python3 The overriding idea behind system administration of a modern 21st century Linux system such as the Raspberry Pi OS is the use of systemd to ensure that the Linux kernel works efficiently and effectively to provide these three foundation stones of computer operation and management computer system concurrency virtualization and secure persistence Exercises are included throughout to reinforce the readers learning goals with solutions and example code provided on the accompanying GitHub site This book is aimed at students and practitioners looking to maximize their use of the Raspberry Pi OS With plenty of practical examples projects and exercises this volume can also be adopted in a more formal learning environment to supplement and extend the basic knowledge of a Linux operating system

Complex, Intelligent and Software Intensive Systems Leonard Barolli,2023-06-18 This book aims to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ICT enabled applications software intensive systems complex systems and intelligent systems Software intensive systems are systems which heavily interact with other systems sensors actuators devices other software systems and users More and more domains are involved with software intensive systems e g automotive telecommunication systems embedded systems in general industrial automation systems and business applications Moreover the outcome of web services delivers a new platform for enabling software intensive systems Complex systems research is focused on the overall understanding of systems rather than its components Complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions They evolve and adapt through internal and external dynamic interactions The development of intelligent systems and agents which is each time more characterized by the use of ontologies and their logical foundations builds a fruitful impulse for both software intensive systems and complex systems Recent research in the field of intelligent systems robotics neuroscience artificial intelligence and cognitive sciences are very important factor for the future development and innovation of software intensive and complex systems **Emerging**

Trends in Computer Science and Its Application Anurag Tiwari,Manuj Darbari,2025-04-08 The conference brought together a diverse group of scholars researchers and industry professionals to engage in meaningful discussions and share insights on cutting edge trends in artificial intelligence machine learning data science and their multifaceted applications This collaboration and knowledge exchange fostered an environment of innovation making the conference a successful and impactful event for all participants It aimed to highlight these significant advancements and serve as a valuable resource for researchers academicians and practitioners who wish to stay informed about the recent innovations and methodologies

shaping the landscape of computational intelligence By showcasing a wide range of research topics and practical implementations it not only addressed the current challenges but also inspired new ideas and approaches for future research
