Structural Equation Modeling of Relative Desired Travel Amounts David Terrance Ory,2007

Using Longitudinal Structural Equation Modeling to Study the Development of Intelligence and Its Relation to Academic Achievement ,2017 In 2013 Drs Allen and Adele Gottfried shared the Fullerton longitudinal data with us The data provided a unique opportunity to investigate the intellectual development and the longitudinal relation between intelligence and academic achievement Previous studies have seldom addressed the latent nature of intelligence and academic achievement Instead they commonly used observed IQ scores and achievement test scores directly Therefore the stability of intelligence and the relation between intelligence and achievement were underestimated to some extent due to measurement error in the observed scores Using structural equation models in which both intelligence and academic achievement were measured as latent constructs theoretically free of measurement error we found that intelligence was very stable from infancy to adolescence Furthermore the effect of intelligence at earlier stages on the current intelligence was fully mediated by the intelligence at the adjacent preceding stage Not surprisingly intelligence was very predictive for students initial achievement at school However after controlling for the previous achievement intelligence was not predictive of subsequent achievement This case study guides readers through the whole process of conducting a data driven research from preparing data to selecting appropriate methodologies and then from interpreting significant results to reporting important findings This case study demonstrates the potential value of

reexamining classic findings using modern analytic techniques This case study pays particular attention to making reasonable modifications to models determining the best models and interpreting the results to answer research questions

Biostatistical Models with Latent Variables Jia Guo,2006 Structural Equation Modeling David Kaplan,2000-10-17 By focusing on how structural equation modeling SEM can illuminate what we know about social and behavioral phenomena rather than on the ins and outs of the various SEM programs eg AMOS LISREL EQS David Kaplan demonstrates to the reader the utility of SEM its limitations and the statistical underpinnings of the method The book begins with an explanation of confirmatory factor analysis and path analysis and how these two techniques can be combined for SEM *Social Support and Cardiac Invalidism Following Acute Myocardial Infarction* Barbara Riegel,1991
