Downstream Processing Of Proteins Methods And Protocols Methods In Biotechnology 9:

Downstream Processing of Proteins Mohamed A. Desai, 2008-02-05 Considerable effort and time is allocated to introducing cell culture and fermentation technology to undergraduate students in academia generally through a range of courses in industrial biotechnology and related disciplines Similarly a large number of textbooks are available to describe the applications of these technologies in industry However there has been a general lack of appreciation of the significant developments in downstream processing and isolation technology the need for which is largely driven by the stringent regulatory requirements for purity and quality of injectable biopharmaceuticals This is particularly reflected by the general absence of coverage of this subject in many biotechnology and related courses in educational institutions For a considerable while I have felt that there is increasing need for an introductory text to various aspects of downstream processing particularly with respect to the needs of the biopharmaceutical and biotechnology industry Although there are numerous texts that cover various aspects of protein purification techniques in isolation there is a need for a work that covers the broad range of isolation technology in an industrial setting It is anticipated that **Downstream Processing of Proteins Methods and Protocols** will play a small part in filling this gap and thus prove a useful contribution to the field It is also designed to encourage educational strategists to broaden the coverage of these topics in industrial biotechnology courses by including accounts of this important and rapidly developing element of the industrial process

Downstream Processing of Proteins Mohamed A. Desai, 2000 Mohamed A Desai and a team of experienced biotechnologists review both conventional and novel isolation techniques used in industrial applications for the downstream processing of protein molecules These techniques include primary and secondary separations during the isolation of biomolecules as well as unique laboratory scale research methods from academia with a potential for scale up Also treated are various strands of the downstream biological process essential for a successful product license application including both the validation of DSP stages and the design and validation of viral clearance stages during the purification process **Downstream Processing of Proteins Methods and Protocols** provides scientists everywhere but particularly in the biopharmaceutical and biotechnology industry with a much needed introduction to this critical technology

Process Scale Purification of Antibodies Uwe Gottschalk, 2017-03-02 Promoting a continued and much needed renaissance in biopharmaceutical manufacturing this book covers the different strategies and assembles top tier technology experts to address the challenges of antibody purification Updates existing topics and adds new ones that include purification of antibodies produced in novel production systems novel separation technologies novel antibody formats and alternative scaffolds and strategies for ton scale manufacturing Presents new and updated discussions of different purification technologies focusing on how they can address the capacity crunch in antibody purification Emphasizes antibodies and innovative chromatography methods for processing
