**Integrated Design** Eleftheria Fasoulaki,2008 There are building systems called modularized in which the component systems for structure lighting etc can be analyzed and synthesized independently since their performance and design do not interact or affect one another There are other building systems called coupled in which the component systems do interact and influence one another The thesis acknowledges that in a building there are both sub systems that act independently and others that interact While many design processes have been proposed for dealing with discrete sub systems there is no systematic study for building sub systems that interrelate This thesis examines a different design approach called integrated The term integrated has a dual utilization in this study The first use refers to the integration of form and building performance The second use refers to the integration of interrelated and diverse building performances involving multiple disciplines The integrated design approach analyzes and evaluates several interrelated design systems involving different disciplines in the early design phase The goal of the approach is the generation of design alternatives guided simultaneously by two basic objectives the aspiration for form exploration and the satisfaction of the performances of interrelated systems After defining a framework for an integrated design approach which includes inter disciplinary collaboration unified design optimization simulation and other formal and digital techniques the approach will be demonstrated in a case study The objective of the case study is to demonstrate that the integrated design approach has validity and can be realized in this case for the generation of high rise buildings guided by structural lighting zoning codes and aesthetic criteria

**Convergence** Randy Deutsch,2017-05-02 There is today a pronounced and accelerated convergence in architecture This convergence is occurring by doers not thinkers in practice not academia in building design fabrication and construction It is about solution centric individuals engaged in real time problem solving not in abstractions The nature of this convergence where things are converging and what that means for architecture is the subject of this book from the Introduction Those working in architecture and engineering feel pressure to work faster at lower cost while maintaining a high level of innovation and quality At the same time emergent tools and processes make this possible Convergence is about the firms teams and people who thrive in this environment as a result of their ability to creatively

combine and innovate It seeks to answer several timely questions What are the tools and work processes that are converging How are individuals and organizations converging their tools and work processes What challenges and benefits are they seeing What is the ultimate endgame of this convergence What skillsets and mindsets would someone need to develop to work effectively in this changing environment What are the implications of convergence on the role of the designer and on design On how we design build fabricate and construct On how we work The book explains how convergence relates to but ultimately differs from integration consolidation multi tasking automation and other forms of optimization The practice based research builds upon the author s research in BIM and in the collaborative leveraging of data in design and fabrication As an investigation and meditation on the impact of technology on the education and making of design professionals Convergence explains what is happening in the world of design and discusses the implications for the future of education training and practice
