Principles of Demography Donald J. Bogue, 1969 Textbook on the theoretics of demographic study covers historical aspects of demography as a social sciences discipline research methods the principles of analysing and forecasting in respect of human populations etc Bibliography at the end of each chapter and references    **Sources** ,2001    Development Policy Implications of Age-structural Transitions in Arab Countries United Nations. Economic and Social Commission for Western Asia, 2014 This report shows that the Arab countries are currently undergoing profound age structural transitions which will have significant implications for their development It argues that countries can best manage and benefit from the consequences of the age structural transitions taking place across the Arab region by adopting a life course approach in analysis and policy However social and economic policies in the Arab countries have not succeeded in integrating this approach This report therefore suggests reforms across social and economic policy areas including labour market and social protection reforms and suggests how the post 2015 UN Development Agenda can integrate a life course perspective It brings a new urgency to the debate arguing that transformational change is needed to integrate the needs and potentials of the different age groups in the Arab countries    Bulletin ,1991    A South African Labour Market Bibliography Faldie Esau, Dudley Horner, 1997    American Book Publishing Record ,1985    **Journal of the American Dietetic Association** ,1969    **Arts & Humanities Citation Index** ,2002    **Population and Society** Dudley L. Poston, Jr., Leon F. Bouvier, 2010-04-07 Population and Society An Introduction to Demography is an ideal text for undergraduate as well as graduate students taking their first course in demography It is sociologically oriented although economics political science geography history and the other social sciences are also used to inform the materials Although the emphasis is on demography the book recognizes that at the individual level population change is related to private decisions especially in relation to fertility but also to mortality and migration The text thus considers in some detail the role of individuals in population decision making At the level of countries and even the world changes in population size have an important effect on the environmental and related challenges facing all of the world's inhabitants Therefore attention is paid to the broad implications of population growth and change
