Digital DNA Peter F. Cowhey,Jonathan D. Aronson,2017-06-30 Innovation in information and production technologies is creating benefits and disruption profoundly altering how firms and markets perform Digital DNA provides an in depth examination of the opportunities and challenges in the fast changing global economy and lays out strategies that countries and the international community should embrace to promote robust growth while addressing the risks of this digital upheaval Wisely guiding the transformation in innovation is a major challenge for global prosperity that affects everyone Peter Cowhey and Jonathan Aronson demonstrate how the digital revolution is transforming the business models of high tech industries but also of traditional agricultural manufacturing and service sector firms The rapidity of change combines with the uncertainty of winners and losers to create political and economic tensions over how to adapt public policies to new technological and market surprises The logic of the policy trade offs confronting society and the political economy of practical decision making is explored through three developments The rise of Cloud Computing and trans border data flows international collaboration to reduce cybersecurity risks and the consequences of different national standards of digital privacy protection The most appropriate global strategies will recognize that a significant diversity in individual national policies is inevitable However because digital technologies operate across national boundaries there is also a need for a common international baseline of policy fundamentals to facilitate quasi convergence of these national policies Cowhey and Aronson s examination of these dynamic developments lead to a measured proposal for authoritative soft rules that requires governments to create policies that achieve certain objectives but leaves the specific design to national discretion These rules should embrace mechanisms to work with expert multi stakeholder organizations to facilitate the implementation of formal agreements enhance their political legitimacy and technical expertise and build flexible learning into the governance regime The result will be greater convergence of national policies and the space for the new innovation system to flourish

Competitive comparison : Cloud versus on-premise, 3 concrete use cases Emiel Van Belle, 2021 Sinds de opkomst van cloud computing is de wereld van IT niet meer dezelfde Steeds meer organisaties introduceren cloud computing in hun infrastructuur maar dit is een grote kost Cloud oplossingen blinken uit door hun flexibiliteit snelheid en moderne architectuur Door de drang om diens organisatie future proof te maken zijn overhaaste beslissingen voor cloud oplossingen niet uitzonderlijk Het is dus niet altijd evident om te bepalen of een cloud oplossing gunstig is voor een bepaalde toepassing Daarnaast bestaat er vandaag de dag nog steeds een onzekerheid wat cybersecurity bij cloud computing en datacenters betreft In deze thesis wordt getracht een algemeen duidelijk beeld van het begrip weer te geven en worden de voor en nadelen van cloud computing op een rij gezet en verduidelijkt Aan de hand van de on premise opstellingen van Wolters Kluwer kon een onderzoek gevoerd worden naar de uiteindelijke price per project voor 3 frequent gebruikte uit het bedrijfsleven gegrepen use cases voor zowel een on premise opstelling als een cloudoplossing Binnen deze use cases werden zoveel mogelijk verschillende situaties getackled in de hoop dat een organisatie zich aan een van deze use cases kan spiegelen Er kan geconcludeerd worden dat de resultaten van de verschillende use cases erg uiteenlopend zijn en dat de keuze tussen cloud of on premise oplossingen afhankelijk zijn van verschillende parameters Clouddiensten zijn enorm breed er zijn dus zeker nog enkele use cases parameteres en bijkomende kosten die in dit onderzoek niet behandeld werden Ook gaat de wereld van IT in het bijzonder cloud computing als een sneltrein vooruit waardoor er zeker nog ruimte is voor verder onderzoek

Because it was costly to buy a mainframe, it became important to find ways to get the greatest return on the investment in them, allowing multiple users to share both the physical access to the computer from multiple terminals, as well as to share the CPU time, eliminating periods of inactivity, which became known in the industry as time sharing. As computers became more prevalent, scientists and technologists explored ways to make large-scale computing power available to more users through time sharing, experimenting with algorithms to provide the optimal use of the infrastructure platform and applications with prioritized access to the CPU and efficiency for the end users. Due to the expense of these powerful computers, many corporations and other entities could avail themselves of computing capability through time sharing, and several organizations, such as GE's GEISCO (IBM subsidiary), The Service Bureau Corporation, Tymshare (founded in 1966), National CSS (founded in 1967 and bought by Dun Bradstreet in 1979), Dial Data (bought by Tymshare in 1968), and Bolt Beranek and Newman, marketed time sharing as a commercial venture. By mid-2008, Gartner saw an opportunity for cloud computing to shape the relationship among consumers of IT services: those who use IT services and those who sell them, and
