Contributing authors come from both hard and soft sciences include education and the arts and ask children who will be the future space dwellers for their visions They document needed research There are three underlying assumptions driving this book First that the human urge for flight exploration and survival plus its curiosity about the universe are deeply embedded in our genes and in our minds Second that even if these urges were ignored the continual improvement of the quality of life for the human race on earth and perhaps even its ultimate survival hinge on the successes of human exploration and habitation of space and Third that our generation can use the opportunity presented by outwards expansion to design a rewarding and exciting future of collaboration to capitalise on the lessons learned from human history on Earth
