**Aquananotechnology** David E. Reisner, T. Pradeep, 2014-09-24 The world's fresh water supplies are dwindling rapidly even wastewater is now considered an asset. By 2025 most of the world's population will be facing serious water stresses and shortages. **Aquananotechnology: Global Prospects** breaks new ground with its informative and innovative introduction of the application of nanotechnology to the remediation of contaminated water for drinking and industrial use. It provides a comprehensive overview from a global perspective of the latest research and developments in the use of nanotechnology for water purification and desalination methods. The book also covers approaches to remediation such as high surface area nanoscale media for adsorption of toxic species, UV treatment of pathogens and regeneration of saturated media with applications in municipal water supplies, produced water from fracking, ballast water and more. It also discusses membranes, desalination, sensing, engineered polymers, magnetic nanomaterials, electrospun nanofibers, photocatalysis, endocrine disruptors and Al13 clusters. It explores physics-based phenomena such as subcritical water and cavitation-induced sonoluminescence and fog harvesting. With contributions from experts in developed and developing countries including those with severe contamination such as China, India and Pakistan, the book's content spans a wide range of the subject areas that fall under the aquananotechnology banner, either squarely or tangentially. The book strongly emphasizes sorption media with broad application to a myriad of contaminants, both geogenic and anthropogenic, keeping in mind that it is not enough for water to be potable; it must also be palatable.

**Proceedings of the Indian Geotechnical Conference (IGC 2024), Volume 7** Manish S. Dixit, Sumeet S. Jaiswal, Neelima Satyam, Awadhesh P. Singh, Vidya Bhushan Maji, 2025-11-17 This book presents select proceedings of the Indian Geotechnical Conference IGC 2024 held at MIT Chhatrapati Sambhajnagar. The book provides the collection of papers that were presented at the IGC 2024. The book covers topics related to geophysical investigation, shallow and deep foundation, geosynthetics, earth retaining structures, soil dynamics, ground improvement, physical and numerical modelling, tunnelling and underground structures, reliability in geotechnical engineering, geomaterial characterisation and so on. This book provides its readers an opportunity to enhance their research capacities and knowledge in the various fields of geotechnical engineering. This book is a valuable reference book for beginners, researchers, academicians and professionals interested in geotechnical engineering covering the design and execution of foundations and other structures for a variety of infrastructural projects.

*Handbook of Research on Sustainable Development Goals, Climate Change, and Digitalization* Castanho, Rui Alexandre, 2021-11-12 In recent years the world has been changing considerably. Within the many obstacles, barriers and opportunities, three significant challenges should be considered for the future planning of our territories and cities seeking to achieve Sustainable Development Goals (SDG) facing climate change and performing a shift towards digitalization. Considering these three challenges, we can work toward a more sustainable future for the environment. *The Handbook of Research on Sustainable Development Goals, Climate Change and Digitalization*
