   Radio Frequency Machine Learning: A Practical Deep Learning Perspective Scott Kuzdeba,2025-01-31 Radio Frequency Machine Learning A Practical Deep Learning Perspective goes beyond general introductions to deep learning offering a focused exploration of how modern deep learning techniques can be applied directly to radio frequency RF challenges It covers a wide range of applications including classification tasks where deep learning is used to label and categorize signals based on a labeled training dataset as well as clustering tasks that group similar signals together without labels Additionally it expands into deep learning generative AI for waveform synthesis and how reinforcement learning can be used within the domain This book also investigates advanced topics like RF sensor control feedback mechanisms and real time system operations offering a comprehensive understanding of how deep learning can be integrated into dynamic RF environments This resource addresses the practical concerns of deploying machine learning in operational RF systems It goes beyond applications and techniques covering how to ensure the robustness of solutions with insights into data sources augmentation techniques and strategies for integrating ML with existing RF infrastructure The full development process is examined from data collection to deployment along with numerous case studies throughout Looking to the future the book explores emerging trends like edge computing and federated learning offering a forward looking perspective on the continued evolution of RF machine learning Whether the reader is just beginning the journey into RF machine learning or is looking to refine skills this book provides an essential resource for understanding the intersection of deep learning and RF technology This is a must have resource for anyone interested in the cutting edge of wireless technologies and their potential to shape the future of communication   Essential Principles of Signals Collection and Analysis David A. Garren,Uttam K. Majumder,Erik P. Blasch,2023-07-31 This book provides a clear and systematic introduction to the basic concepts foundational mathematics principles and application of signals collection and supporting technologies It describes the essential principles of signals collection and analysis for both tactical and commercial applications and applies the foundational principles and concepts pertaining to the collection and exploitation of uncooperative signals of interest You will be equipped with the basic concepts and skills necessary to manage and develop signals collection systems and benefit from the practical hands on information you can confidently implement and apply You will also find abundant references included to guide you further in the areas of signals collection The book uniquely presents the fundamental mathematics of the collection and processing of signals in a manner easily understood by newcomers to the field while practitioners will find it to be a practical go to desktop reference for signal analysis This is an ideal one of a kind text for graduate students analysts managers and others who need a rapid introduction to the diverse and growing field of signals analytics   Smart Cities and Artificial Intelligence Christopher Grant Kirwan,Fu Zhiyong,2025-12-02 Smart Cities and Artificial Intelligence Convergent Systems for Planning Design and Operations Second Edition presents an integrated perspective on how cities are evolving as

intelligent ecosystems shaped by the convergence of human technological and environmental systems Drawing on developments in machine learning neural networks geospatial intelligence data analytics and visualization sensors and smart connected objects the book explains how these elements combine to form a new urban collective intelligence By framing cities as real time adaptive living systems and by introducing tools such as generative design and living lab models the book equips readers with the conceptual and practical foundation needed to plan design and operate next generation smart cities Adopting a multidisciplinary and systems based approach it provides a holistic understanding of smart cities through interconnected theory planning and design methodologies system architecture and applied smart city functions all aimed at enabling more liveable sustainable and self regulating urban environments The second edition introduces a new section in each chapter framed as reflections and projections offering insights across the ten year window from 2020 when the first edition was published through 2030 These additions align the book with recent developments in AI and urban technologies and include an expanded comparison of global smart cities in the City DNA section examining how different cities evolve adopt technology and shape distinctive global identities and competitive positions Additional updates include new material on Digital Twins and the Metaverse as emerging extensions of the smart city operating system select new use cases refreshed references and an expanded glossary to improve clarity and accessibility Together these enhancements ensure that the book remains current and useful for practitioners policymakers researchers and educators shaping the future of urban intelligence Features diverse smart city examples and initiatives from around the globe Includes best practices and guidelines for planning designing and implementing smart city projects as well as how to measure and evaluate their effectiveness Provides numerous diagrams to illustrate and explain complex smart city systems and solutions Discusses the role of citizens and communities in the design and implementation of smart city initiatives and citizen centric smart cities New to the second edition Revised content throughout the book including updated references refreshed case studies and an expanded glossary of terms The second edition also strengthens several core discussions reflecting the rapid acceleration of AI since the first edition and introduces new material on Digital Twins the Metaverse and reflections projections on convergence spanning 2020 2025 2030 Together these updates support a broader perspective on how cities are evolving toward more adaptive citizen centric and self regulating systems   Deep Learning for Radar and Communications Automatic Target Recognition Uttam K. Majumder,Erik P. Blasch,David A. Garren,2020-07-31 This authoritative resource presents a comprehensive illustration of modern Artificial Intelligence Machine Learning AI ML technology for radio frequency RF data exploitation It identifies technical challenges benefits and directions of deep learning DL based object classification using radar data including synthetic aperture radar SAR and high range resolution HRR radar The performance of AI ML algorithms is provided from an overview of machine learning ML theory that includes history background primer and examples Radar data issues of collection application and examples for SAR HRR data and communication signals analysis are discussed In addition

this book presents practical considerations of deploying such techniques including performance evaluation energy efficient computing and the future unresolved issues **Use of Machine Learning in Radio Frequency Integrated Circuits (RFIC) Development** Qiang Cui (Computer engineer),2015 This Master s Thesis starts with an introduction to the radio frequency integrated circuits RFICs industry and a discussion on the key problem of the existing RFIC development process the need for multiple trial and error iterations due to inaccurate simulations This simulation inaccuracy happens because the existing electronic design automation EDA software and the underlying physics based IC models fail to fully capture the nonlinear frequency dependent RF parasitic effects To overcome this problem in this thesis we propose the use of machine learning in RFIC development Machine learning uses statistical models to recognize hidden patterns from sample data points known as training generalize patterns and make predictions based on new data In theory machine learning can capture the nonlinear frequency dependent RF parasitic effects very well thanks to the large variety of nonlinear modelling techniques at its disposal such as polynomial regressions and neural networks Therefore this thesis investigates for the first time the feasibility of using machine learning in RFIC development to solve the problem of inaccurate RFIC simulation
