

Machine Learning Basics Study Guide

1. What is Machine Learning?

Machine Learning (ML) is a subset of artificial intelligence (AI) that allows systems to automatically learn and improve from experience without being explicitly programmed. It involves training a model on data to make predictions or decisions based on new, unseen data.

2. Types of Machine Learning

There are three main types of machine learning:

a. Supervised Learning:

- **Definition:** The model is trained on labeled data, meaning the input data comes with known output labels.
- **Objective:** Learn the mapping between input and output.
- **Example:** Spam email classification (emails are labeled as "spam" or "not spam").
- **Algorithms:** Linear Regression, Logistic Regression, Support Vector Machines (SVM), k-Nearest Neighbors (k-NN), Decision Trees, Random Forests.

b. Unsupervised Learning:

- **Definition:** The model is trained on unlabeled data, and the system tries to find hidden patterns in the data.
- **Objective:** Discover the structure of the data, such as grouping or clustering.
- **Example:** Customer segmentation in marketing (grouping customers based on purchasing behavior).
- **Algorithms:** K-means clustering, Hierarchical Clustering, Principal Component Analysis (PCA).

c. Reinforcement Learning:

- **Definition:** The model learns by interacting with an environment and receiving feedback in the form of rewards or punishments.
 - **Objective:** Maximize the cumulative reward over time.
 - **Example:** Training a robot to walk or playing video games.
 - **Algorithms:** Q-Learning, Deep Q-Networks (DQN), Policy Gradient Methods.

Machine Learning Christopher William, 2019-09-28. Machine learning is a branch of artificial intelligence which involves the design and development of systems capable of self improvements showing an improvement in performance based upon their previous experiences. In other words these systems can learn by processes similar to human learning process. Machine learning algorithms can be classified into two broad categories supervised and the unsupervised. In supervised learning algorithms the training data includes both inputs and outputs. The outputs answers to the problems are known as targets. These in supervising the machine learning model as it tries to identify trends and patterns underlying your data. In unsupervised learning algorithms the training data includes inputs only the targets are not provided. The answers to the inputs have to be discovered through a deep search. There are a number of steps which must be followed during the course of machine learning. These include collecting and preparing the data and training validating and then applying the model. When all these steps are completed you will be able to use your model to make predictions. Machine learning is a new and growing field and its emergence is a promising answer to the unimaginable quantities of data which will be generated by organizations and individuals during the upcoming years. The predictive capacity of the various machine learning algorithms is most attractive to businesses who are rushing to incorporate machine learning into their day to day operations. Machine learning can help businesses predict future performance and make necessary adjustments in order to remain stable and even to increase profits. This guide has been compiled to take you through the basics of machine learning that includes artificial intelligence big data and machine learning with python. Here are some of the chapters covered. Definition of machine learning and its categories. How different models work on new data. Machine Learning Tools. Fundamental Algorithms and Concepts of

Probability Chapter 7 Data Scrubbing Setting up your data Regression Analysis Clustering Artificial Neural Network Ensemble Modeling Building a Model in Python Model Optimization Practical Codes and Exercises to Use Python And finally where to go from here Clearly the future of machine learning is bright Machine learning models can make the work of human beings easier This fact alone should be enough to motivate human beings toward learning machine learning
