Hofmann, 2010 *Scientific Writing and Communication Papers Proposals and Presentations* covers all the areas of scientific communication that a scientist needs to know and to master to successfully promote his or her research and career. This unique all in one handbook begins with a discussion of the basics of scientific writing style and composition and then applies these principles to writing research papers, review articles, grant proposals, research statements, and resum s as well as to preparing academic presentations and posters. FEATURES A practical presentation carefully introduces such basic writing mechanics as word choice and word location, sentence structure, and paragraph organization before moving into manuscript planning and organizational strategies. Extensive hands on guidance for composing scientific documents and presentations then follows. Relevant and multi disciplinary examples taken from real research papers and grant proposals by writers ranging from students to Nobel Laureates illustrate clear technical writing as well as common mistakes that one should avoid. Examples are drawn from a broad range of scientific disciplines including medicine, molecular biology, biochemistry, ecology, geology, chemistry, engineering, and physics. Extensive end of chapter exercise sets provide the opportunity to review style and composition principles and encourage readers to apply them to their own writing. Writing guidelines and revision checklists warn scientists against common pitfalls and equip them with the most successful techniques to revise a scientific paper, review article, or grant proposal. Annotated text passages bring the writing principles and guidelines to life by applying them to real world relevant and multidisciplinary examples. Clear, easy to follow writing style is understandable to both native and non native English speakers. Special ESL features address problems faced by non native English speakers. **A Scientific Approach to Writing for Engineers and Scientists** Robert E. Berger, 2014-05-23 A SCIENTIFIC APPROACH TO WRITING Technical ideas may be solid or even groundbreaking but if these ideas cannot be clearly communicated reviewers of technical documents e.g. proposals for research funding articles submitted to scientific journals and business plans to commercialize technology are likely to reject the argument for advancing these ideas The problem is that many engineers and scientists entirely comfortable with the logic and principles of mathematics and science treat writing as if it possesses none of these attributes The absence of a systematic framework for writing often results in sentences that are difficult to follow or arguments that leave reviewers scratching their heads This book fixes that problem by presenting a scientific approach to writing that mirrors the sensibilities of scientists and engineers an approach based on an easily discernable set of principles Rather than merely stating rules for English grammar and composition this book explains the reasons behind these rules and shows that good

reasons can guide every writing decision This resource is also well suited for the growing number of scientists and engineers in the U S and elsewhere who speak English as a second language as well as for anyone else who just wants to be understood
