applications in an important area of WWW research Provides guidelines for introducing knowledge management concepts and tools into enterprises to help knowledge providers present their knowledge efficiently and effectively Introduces an intelligent search tool that supports users in accessing information and a tool environment for maintenance conversion and acquisition of information sources Discusses three large case studies which will help to develop the technology according to the actual needs of large and or virtual organisations and will provide a testbed for evaluating tools and methods The book is aimed at people with at least a good understanding of existing WWW technology and some level of technical understanding of the underpinning technologies XML RDF It will be of interest to graduate students academic and industrial researchers in the field and the many industrial personnel who are tracking WWW technology developments in order to understand the business implications It could also be used to support undergraduate courses in the area but is not itself an introductory text
