Art Theory as Visual Epistemology Harald Klinke, 2014-06-26 How can we know What does knowledge mean These were the fundamental questions of epistemology in the 17th century In response to continental rationalism the British empiricist John Locke proposed that the only knowledge humans can have is acquired a posterior In a discussion of the human mind he argued the

source of knowledge is sensual experience mostly vision Since vision and picture making are the realm of art art theory picked up on questions such as are pictures able to represent knowledge about the world How does the production of images itself generate knowledge How does pictorial logic differ from linguistic logic How can artists contribute to a collective search for truth Questions concerning the epistemic potential of art can be found throughout the centuries up until the present day However these are not questions of art alone but of the representational value of images in general Thus the history of art theory can contribute much to recent discussions in Visual Studies and Bildwissenschaften by showing the historic dimension of arguments about what images are or should be What is knowledge is as much a philosophic question as What is an image Visual epistemology is a new and promising research field that is best investigated using an interdisciplinary approach that addresses a range of interconnected areas such as internal and external images and the interplay of producer and perceiver of images This publication outlines this territory by gathering together several approaches to visual epistemology by many distinguished authors

Historical Networks in the Book Trade Catherine Feely, John Hinks, 2016-10-14 The book trade historically tended to operate in a spirit of co operation as well as competition Networks between printers publishers booksellers and related trades existed at local regional national and international levels and were a vital part of the business of books for several centuries This collection of essays examines many aspects of the history of book trade networks in response to the recent spatial turn in history and other disciplines Contributors come from various backgrounds including history sociology business studies and English literature The essays in Part One introduce the relevance to book trade history of network theory and techniques while Part Two is a series of case studies ranging chronologically from the Middle Ages to the twentieth century Topics include the movement of early medieval manuscript books the publication of Shakespeare the distribution of seventeenth century political pamphlets in Utrecht and Exeter book trade networks before 1750 in the English East Midlands the itinerant book trade in northern France in the late eighteenth century how an Australian newspaper helped to create the Scottish public sphere the networks of the Belgian publisher Murquardt and transatlantic radical book trade networks in the early twentieth century

Design for Information Isabel Meirelles, 2013-10-01 The visualization process doesn't happen in a vacuum it is grounded in principles and methodologies of design cognition perception and human computer interaction that are combined to one's personal knowledge and creative experiences Design for Information critically examines other design solutions current and historic helping you gain a larger understanding of how to solve specific problems This book is designed to help you foster the development of a repertoire of existing methods and concepts to help you overcome design problems Learn the ins and outs of data visualization with this informative book that provides you with a series of current visualization case studies The visualizations discussed are analyzed for their design principles and methods giving you valuable critical and analytical tools to further develop your design process The case study format of this book is perfect for discussing the histories theories and

best practices in the field through real world effective visualizations The selection represents a fraction of effective visualizations that we encounter in this burgeoning field allowing you the opportunity to extend your study to other solutions in your specific field s of practice This book is also helpful to students in other disciplines who are involved with visualizing information such as those in the digital humanities and most of the sciences

Visible Numbers Miles A. Kimball, Charles Kostelnick, 2017-07-05 Bringing together scholars from around the world this collection examines many of the historical developments in making data visible through charts graphs thematic maps and now interactive displays Today we are used to seeing data portrayed in a dizzying array of graphic forms Virtually any quantified knowledge from social and physical science to engineering and medicine as well as business government or personal activity has been visualized Yet the methods of making data visible are relatively new innovations most stemming from eighteenth and nineteenth century innovations that arose as a logical response to a growing desire to quantify everything from science economics and industry to population health and crime Innovators such as Playfair Alexander von Humboldt Heinrich Berghaus John Snow Florence Nightingale Francis Galton and Charles Minard began to develop graphical methods to make data and their relations more visible In the twentieth century data design became both increasingly specialized within new and existing disciplines science engineering social science and medicine and at the same time became further democratized with new forms that make statistical business and government data more accessible to the public At the close of the twentieth century and the beginning of the twenty first an explosion in interactive digital data design has exponentially increased our access to data The contributors analyze this fascinating history through a variety of critical approaches including visual rhetoric visual culture genre theory and fully contextualized historical scholarship
