Simulation Of Coal Gasification Process Using Aspen Plus:

Indirect Coal Gasification Using Aspen-Plus® Model Syed Ali Ammar Taqvi, Fahim Uddin, Inayatullah Memon, 2016-01-22 In view of limited liquid fuels in terms of crude oil reserves and to reduce the use of constantly and rapidly diminishing natural gas reserves researchers are attracted towards Fisher Tropsch reaction Aspen Plus r has become reliable acquainted and recognized processes modeling software extensively in practice for coal and biomass gasification processes It contains different physical property packages that are useful for solid handling Aspen Plus r model has been proposed to develop a better understanding of the process for geometric analysis of gasifier This simulation presents an alternate technology for conventional coal gasification to improve the performance of process by varying geometry of gasifier The Purpose of this study is entirely focus on the production of synthesis gas from coal through a process of indirect gasification and using only steam as the gasifying medium The book serves as reference material for students engineers and scientists working in the area of syngas production and coal gasification *Advances in Energy Resources and Environmental Engineering* Abdelfatah Abomohra, Razif Harun, Jia Wen, 2024-06-26 This book provides the recent advanced research results of environmental engineering and energy resources covering the main multidisciplinary research on waste treatment and recycling ecological environment protection energy strategy management etc The exploitation and extensive utilization of energy and resources result in negative impacts on the environment Therefore the use of energy and resources efficiently and eco friendly has become an urgent research direction in environmental engineering This book aims to promote scientific information exchange between scholars from universities research centers and high tech enterprises around the world which is beneficial to researchers and practitioners in the field of environmental engineering *Waste to Energy* S. Syngellakis, 2014-12-30 Waste to Energy deals with the very topical subject of converting the calorific content of waste material into useful forms of energy It complements and to a certain degree overlaps with its companion volume Biomass to Biofuels since a significant proportion of biomass converted to energy nowadays originates from various types of waste The material in the first more substantial part of the volume has been arranged according to the type of process for energy conversion Biochemical processes are described in six articles These relate to the production of methane by anaerobic digestion reactor conversion efficiencies investigations on ethanol production from biodegradable municipal solid waste through hydrolysis and fermentation hydrogen production from glucose through a hybrid anaerobic and photosynthetic process biodiesel production from used cooking oil through base catalyzed transesterification Conversions by thermochemical processes are discussed in the subsequent eleven articles of the volume These cover combustion the direct use of heat energy using the heat produced in thermal power stations for steam and ultimately electricity generation municipal solid waste and refuse derived fuel In another article computational fluid dynamics modelling is applied to assess the influence of process parameters and to perform optimization studies A group of articles deal with more complex

thermochemical processes involving combustion combined with pyrolysis and gasification Two articles focus on biofuels as feed for fuel cells In the last six articles the emphasis is on management and policy rather than technical issues *Chemical Looping Systems for Fossil Energy Conversions* Liang-Shih Fan,2011-02-14 This book presents the current carbonaceous fuel conversion technologies based on chemical looping concepts in the context of traditional or conventional technologies The key features of the chemical looping processes their ability to generate a sequestration ready CO₂ stream are thoroughly discussed Chapter 2 is devoted entirely to the performance of particles in chemical looping technology and covers the subjects of solid particle design synthesis properties and reactive characteristics The looping processes can be applied for combustion and or gasification of carbon based material such as coal natural gas petroleum coke and biomass directly or indirectly for steam syngas hydrogen chemicals electricity and liquid fuels production Details of the energy conversion efficiency and the economics of these looping processes for combustion and gasification applications in contrast to those of the conventional processes are given in Chapters 3 4 and 5 Finally Chapter 6 presents additional chemical looping applications that are potentially beneficial including those for H₂ storage and onboard H₂ production CO₂ capture in combustion flue gas power generation using fuel cell steam methane reforming tar sand digestion and chemicals and liquid fuel production A CD is appended to this book that contains the chemical looping simulation files and the simulation results based on the ASPEN Plus software for such reactors as gasifier reducer oxidizer and combustor and for such processes as conventional gasification processes Syngas Chemical Looping Process Calcium Looping Process and Carbonation Calcination Reaction CCR Process Note CD ROM DVD and other supplementary materials are not included as part of eBook file
