### **ABSTRACT**

*In recent years there has been an increase in the size of Big Data as a result of the growth of social networks, Internet of Things (IoT), business information, etc. A number of problems arise when using Big Data. They can be solved by using Cloud Computing. There are many cloud solutions for processing, analysis and data storage but their application requires taking account of and analyzing characteristics as scalability, parameters concerning the hardware configuration, the system and the application software availability price, etc. A comparative analysis of cloud service providers is made in this article, and guidelines for optimal choice of the provider are defined.*

*Keywords:* cloud computing, private cloud, big data.

### **INTRODUCTION**

In recent years trends of information growth at an increasingly large scale have been observed. The terms terabyte, zeta byte and Big Data are circulating in the public domain more and more often. The reasons for big data growth refer to:

- Accelerated growth of the number of IoT and registration of events from radio frequency identifiers (RFID);
- A huge flow of data from social networks in the Internet;
- Accumulation of large volumes of business information along with maintaining the existing one;
- Data from subscribers of the mobile operators;
- Data from devices for audio and video registration;

- Data on the weather conditions and others.

Along with the big data expansion several problems related to its management arise. Those of greater significance are:

Problems in the storage, processing and analysis of Big data, increase of the complexity and volume of the work and lack of hardware equipment and personnel to carry out the process;

Problems with provision of safe storage and information processing in small and medium-sized companies;

Need for spending funds for the purchase of system and application software

Some of these problems can be solved through the usage of cloud services.

Direct and Indirect Participation and Feasibility** Philipp Rothe, 2023-05-24 Master's Thesis from the year 2023 in the subject Business economics Investment and Finance grade 1.0 International School Of Management Campus Frankfurt language English abstract The aim of the master thesis is to examine whether private equity is suitable for tokenization. After analyzing different characteristics of private equity such as the illiquidity or mechanisms like capital calls, the master thesis concluded that the asset class is suitable. Private equity shares in the form of security tokens can help to reduce illiquidity and cashflows like the capital calls can be automated by the use of smart contracts. For the tokenization, the master thesis recommends to use existing standards such as the Ethereum blockchain or the ERC 1400 token. Furthermore, different structures for issuing private equity tokens were elaborated. These include a structure for an indirect participation via a special purpose vehicle which issues tokens and simultaneously invests into a fund but also a direct participation where the fund itself can issue tokens. During the description of possible structures, all relevant laws were included. These include the German Electronic Securities Act eWpG, German Banking Act KWG, Security Prospectus Act WpPG, Capital Investment Act VermAnlG, Securities Trading Act WpHG and the German Investment Code KAGB. All structures were evaluated from the perspective of private equity funds, institutional investors, private investors or other relevant intermediaries. Also, benefits and challenges for the different structures and participants were discussed. The benefits include an increase in efficiency of several processes, potential cost savings, the possibility for funds to reach more investors or the possibility for investors to diversify their portfolio more. Still, these benefits could only be made use of if major challenges are mastered by the market participants. These include an insufficient legal framework, different hurdles when implementing a secondary market or the problem that theoretical approaches might work differently in reality      *Modern Technologies in Materials, Mechanics and Intelligent Systems* X.Y.
