

## 1.1 Summary of the adjustment of IS-LM model

The IS-LM model is a macroeconomic model that is used to analyze the relationship between the real interest rate and the level of output. It is a two-equation model that is derived from the IS and LM equations. The IS equation represents the goods market equilibrium, and the LM equation represents the money market equilibrium. The IS-LM model is used to analyze the effects of monetary and fiscal policy on the economy.

### 1.1.1 The IS-LM model

1. The IS curve is downward sloping because a higher interest rate leads to a lower level of investment and consumption, which reduces the level of output.
2. The LM curve is upward sloping because a higher interest rate leads to a higher level of saving and a lower level of investment, which increases the level of output.
3. The IS-LM model is used to analyze the effects of monetary and fiscal policy on the economy.
4. The IS-LM model is a two-equation model that is derived from the IS and LM equations.
5. The IS-LM model is used to analyze the effects of monetary and fiscal policy on the economy.
