Electricity in Buildings Chartered Institution of Building Services Engineers, 2004 *Building Services Design for Energy Efficient Buildings* Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12

The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings. However, textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating, ventilation, and air conditioning (HVAC) systems, often with little wider context. This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change, together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner. The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail. These are HVAC and electrical systems. In addition, the following issues are addressed: background issues on climate change, whole life performance, and design collaboration; generic strategies for energy efficient, low carbon design; health and wellbeing; and post-occupancy evaluation. Building ventilation, air conditioning, and HVAC system selection; thermal energy generation and distribution systems; low energy approaches for thermal control; electrical systems; data collection; controls and monitoring; building thermal load assessment; building electric power load assessment; space planning; and design integration with other disciplines. In order to deliver buildings that help mitigate climate change impacts, a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines. This book provides a contemporary introduction and guide to this new approach for students and practitioners alike.

Building Services Engineering David V. Chadderton, 2013-01-25

Engineering services within buildings account for ongoing energy use, greenhouse gas contribution, and life safety provisions. This fully updated sixth edition of David Chadderton's leading textbook is the perfect preparation for those intending to enter this increasingly important field. Chapters addressing heating, climate change, air conditioning, transportation systems, water, gas, electricity, drainage, and room acoustics cover all the key responsibilities of the building services engineer. As well as introductory material and the underpinning theory, practical guidance is provided in the form of sample calculations and spreadsheets. New material includes trends and recent applications in lowering the energy use by mechanical and electrical services systems; heating, cooling, and lighting of buildings; case studies modelled from post-occupancy reports to provide realistic discussion topics; examples of the use of photovoltaic solar panels, chilled beams, under-floor air distribution, labyrinths, ground-sourced heat pumps, district heating, and cooling; energy performance certificates; energy auditing; and wind turbines. Outlines of the concepts of global warming, carbon trading, and zero-carbon buildings are included. Exercises in each chapter and online self-study questions are provided. A significantly expanded companion site offers over 1,000 self-test questions, powerpoint slides for lecturers, and an instructor's manual enabling the rapid generation of lectures, assignments, and tests. This is the ideal textbook for students of building services engineering, as

Heating Services in Buildings David E. Watkins, 2011-09-26 Water based heating systems are efficient flexible versatile and offer many advantages over other heating systems These advantages fast response good controllability efficient zonal heating and largely silent operation all require that initial design installation commissioning and maintenance be carried out to a high standard by competent engineers Heating Services in Buildings provides the reader with a detailed and thorough understanding of the principles and elements of heating buildings using modern water based heating systems A key theme of the book is that there is little difference in the approach to the design and engineering between domestic and commercial installations The author's detailed but highly practical approach to the subject ensures there is sufficient information for students from both a craft background and those with more academic backgrounds to understand the material This approach is complemented by straightforward easy to use diagrams Heating Services in Buildings supports a range of educational courses including degree level building services engineering NVQ Level 4 Higher Professional Diploma in Building Services Engineering City Guilds supplementary heating course and the Heating Design and Installation Course accredited by the European Registration Scheme ERS *Building Services Journal*, 2007 **Metric Handbook** Pamela Buxton, 2015-03-05 Significantly updated in reference to the latest construction standards and evolving building types Many

chapters revised including housing transport offices libraries and hotels New chapter on flood aware design Sustainable design integrated into chapters throughout Over 100 000 copies sold to successive generations of architects and designers this book belongs in every design studio and architecture school library The Metric Handbook is the major handbook of planning and design information for architects and architecture students Covering basic design data for all the major building types it is the ideal starting point for any project For each building type the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of As well as building types the Metric Handbook deals with broader aspects of design such as materials acoustics and lighting and general design data on human dimensions and space requirements The Metric Handbook provides an invaluable resource for solving everyday design and planning problems
