As important as

There would be no point in social media if you allowed someone else to optimize an article programming is. There are lots of people who do it, and we can. This article contains only my own opinions, but necessarily the best or most successful ones, or even correct in any way. We all discuss with other programmers, and some are considered. Balanced judgement of value rather than opinion.

It's also important to realize the purpose of this article: not to teach you how to program, but rather to teach you what programming is. That means to be a programmer that's usually ignored by those who would teach you to program. They assume that you already have an idea of what programming is, why you'd want to do it, what's usually involved, and so on. This article answers all those questions for you, so you can then decide whether you want to start learning how to program.

What that is, and let's begin.

What is programming?

Given the general nature of that question, and the fact that programming is seen as a relatively complex subject, you're probably expecting a highly convoluted and technical answer. But you're not going to get one (and you're almost there). In truth, it's quite easy to say what programming is, so I will:

- **Programming is breaking a task down into small steps.**

That's just about the most formal and accurate answer I can give. It also has the added benefit of being concise—and coming from me, which like something you'd find in an official book on the topic, then adding to my credibility.
