**Handbook of Metal-Microbe Interactions and Bioremediation**

Surajit Das, Hirak Ranjan Dash, 2017-04-07 Around the World metal pollution is a major problem. Conventional practices of toxic metal removal can be ineffective and/or expensive, delaying and exacerbating the crisis. Those communities dealing with contamination must be aware of the fundamentals and advances of microbe-mediated metal removal practices because these methods can be easily used and require less remedial intervention. This book describes innovations and efficient applications for metal bioremediation for environments polluted by metal contaminants. *Encyclopedia of Agricultural, Food, and Biological Engineering*

Dennis R. Heldman, Carmen I. Moraru, 2010-10-21 Examining the role of engineering in the delivery of quality consumer products, this expansive resource covers the development and design of procedures, equipment, and systems utilized in the production and conversion of raw materials into food and nonfood consumer goods. With nearly 2000 photographs, figures, tables, and equations, including 128 color figures, the book emphasizes and illustrates the various engineering processes associated with the production of materials with agricultural origin. With contributions from more than 350 experts and featuring more than 200 entries and 3600 references, this is the largest and most comprehensive guide on raw production technology.

**Bioprocess Engineering** Michael L. Shuler, Fikret Kargi, Matthew DeLisa, 2017-03-29

The Leading Introduction to Biochemical and Bioprocess Engineering Updated with Key Advances in Productivity, Innovation, and Safety. *Bioprocess Engineering* Third Edition is an extensive update of the world's leading introductory textbook on biochemical and bioprocess engineering and reflects key advances in productivity, innovation, and safety. The authors review relevant fundamentals of biochemistry, microbiology, and molecular biology, including enzymes, cell functions, and growth, major metabolic pathways, alteration of cellular information, and other key topics. They then introduce evolving biological tools for manipulating cell biology more effectively and to reduce costs of bioprocesses. This edition presents major advances in the production of biologicals, highly productive techniques for making heterologous proteins, new commercial applications for both animal and plant cell cultures, key improvements in recombinant DNA, microbe engineering, techniques for more consistent, authentic post-translational processing of proteins, and other advanced topics. It includes new, improved, or expanded coverage of the role of small RNAs as regulators, transcription, translation, regulation, and differences between prokaryotes and eukaryotes; cell-free processes; metabolic engineering and protein engineering; biofuels and energy, including coordinated enzyme systems, mixed inhibition, and enzyme activation kinetics and two-phase enzymatic reactions; synthetic biology; the growing role of genomics and epigenomics; population balances and the Gompertz equation for batch growth and product formation; microreactors for scale-up, scale-down, including rapid scale-up of vaccine production; the development of single-use technology in bioprocesses; stem cell technology and utilization; use of microfabrication, nanobiotechnology, and 3D printing techniques; advances in animal and plant cell biotechnology. The text makes extensive use of illustrations, examples,

and problems and contains references for further reading as well as a detailed appendix describing traditional bioprocesses Register your product at [informit.com/register](http://informit.com/register) for convenient access to downloads updates and corrections as they become available

**Algal Bioreactors** Eduardo Jacob-Lopes, Leila Queiroz Zepka, Mariany Costa Depra, 2024-11-21 Algal Bioreactors Science Engineering and Technology of Upstream Processes Volume One is part of a comprehensive two volume set that provides all of the knowledge needed to design develop and operate algal bioreactors for the production of renewable resources Supported by critical parameters and properties mathematical models and calculations methods and practical real world case studies readers will find everything they need to know on the upstream and downstream processes of algal bioreactors for renewable resource production Bringing together renowned experts in microalgal biotechnology this book will help researchers scientists and engineers from academia and industry overcome barriers and advance the production of renewable resources and renewable energy from algae Students will also find invaluable explanations of the fundamentals and key principles of algal bioreactors making it an accessible read for students of engineering microbiology biochemistry biotechnology and environmental sciences Presents the physical biological environmental and economic parameters of upstream processes in the operation and development of algal bioreactors to produce renewable resources Explains the main configurations and designs of algal bioreactors presenting recent innovations and future trends Integrates the scientific engineering technology environmental and economic aspects of producing renewable resources and other valuable bioproducts using algal bioreactors Provides real world case studies at various scales to demonstrate the practical implementation of the various technologies and methods discussed

[Application of Nanotechnology in Membranes for Water Treatment](#) Alberto Figoli, Jan Hoinkis, Sacide Alsoy Altinkaya, Jochen Bundschuh, 2017-07-14 The book focuses on Application of Nanotechnology in Membranes for Water Treatment but not only provides a series of innovative solutions for water reclamation through advanced membrane technology but also serves as a medium to promote international cooperation and networking for the development of advanced membrane technology for Universal well being and to achieve the common goal of supplying economically environmentally and societally sustainable freshwater and better sanitation systems This book is unique because the chapters were authored by established researchers all around the globe based on their recent research findings In addition this book provides a holistic coverage of membrane development for water treatment from the membrane preparation and characterizations to the performance for specific processes and applications Since that water scarcity has become a global risk and one of the most serious challenges for the scientific community in this century the publication of this book is therefore significant as it will serve as a medium for a good reference of an alternative solution in water reclamation This book will provide the readers with a thorough understanding of the different available approaches for manufacturing membranes both with innovative polymeric systems and inorganic nano materials which could give enhanced functionalities catalytic and antimicrobial activities to improve the performance of the existing membranes It

will be useful for leading decision and policy makers water sector representatives and administrators policy makers from the governments business leaders business houses in water treatment and engineers scientists from both industrialized and developing countries as well

**Biomass Now** Miodrag Darko Matovic,2013-04-30 This two volume book on biomass is a reflection of the increase in biomass related research and applications driven by overall higher interest in sustainable energy and food sources by increased awareness of potentials and pitfalls of using biomass for energy by the concerns for food supply and by multitude of potential biomass uses as a source material in organic chemistry bringing in the concept of bio refinery It reflects the trend in broadening of biomass related research and an increased focus on second generation bio fuels Its total of 40 chapters spans over diverse areas of biomass research grouped into 9 themes

**Bioprocess Engineering** Michael L. Shuler,Fikret Kargi,2002 This concise yet comprehensive text introduces the essential concepts of bioprocessing internal structure and functions of different types of microorganisms major metabolic pathways enzymes microbial genetics kinetics and stoichiometry of growth and product information to traditional chemical engineers and those in related disciplines It explores the engineering principles necessary for bioprocess synthesis and design and illustrates the application of these principles to modern biotechnology for production of pharmaceuticals and biologics solution of environmental problems production of commodities and medical applications
