Emergency medicine attendings who wish to hone their teaching skills can find a number of books on educational strategies written by physicians from other disciplines However until the publication of the first edition of this book they did not have access to a text written by emergency medicine physicians on methods of teaching that are directly applicable to teaching EM This book was compiled to meet that need Following the introductory section which provides important background information the book s contents are organized into 4 sections that correspond to the core needs and interests of EM educators Section 2 focuses on practical and ethical considerations of teaching in the ED Section 3 provides strategies for teaching specific groups of learners Section 4 looks at the skills that are characteristic of the best EM educators and Section 5 looks indepthly at specific teaching techniques and strategies Now more than ever this book addresses the needs of physician educators from all over the world New chapters discuss lecturing to an international audience using simulation as a teaching tool how to make journal club work for you and other topics that are of broad interest to medical educators in this field In general each chapter has been updated and reviewed to make sure the content was something that emergency physician educators could use in any country The chapter contributors are widely regarded as leaders in the field of emergency medicine education and faculty development Authors were given free rein to develop their chapters and write in their own style They were asked to present their personal views on how to successfully teach the art of emergency medicine rather than review evidence based guidelines regarding medical education As a result most of the chapters have few references This first person approach to a multi authored textbook yields a compilation that varies in style from chapter to chapter and exposes the reader to a variety of communication techniques [A Handbook for Medical Teachers](#) D.I. Students notoriously vote with their feet seeking out the best and most innovative teachers of their subject The most ambitious students have been travelling long distances for their education since universities were first founded in the 13th century making their own educational pilgrimage or peregrinatio This volume deals with the peregrinatio medica from the viewpoint of the travelling students who went where how did they travel what did they find when they arrived what did they take back with them from their studies Even a single individual could transform medical studies or practice back home on the periphery by trying to reform teaching and practice the way they had seen it at the best universities Other contributions look at the universities themselves and how they were actively developed to attract students and at some of the most successful teachers such as Boerhaave at Leiden or the Monros at Edinburgh The essays show how increasing levels of wealth allowed more and more students to make their pilgrimages travelling for weeks at a time to sit at the feet of a particular master In medicine this meant that over the period c 1500 to 1789 a succession of universities became the medical school of choice for ambitious students Padua and Bologna in the 1500s Paris Leiden and Montpellier in the 1600s and Leiden G ttingen and Edinburgh in the 1700s The arrival of foreign students brought wealth to the university towns and this significant economic benefit meant that the governors of these universities tried to ensure the defence of freedom of religion and freedom of speech thus providing the best conditions for the promotion of new views and innovation in medicine The collection presents a new take on the history of medical education as well as universities travel and education more widely in ancien r gime Europe
