is a firm can create a market strategy for a new product that takes into account the fact that different customers will be  
willing to pay different prices based on their expertise and perception of the product s value In addition this strategy  
considers that consumers will also want different models of the product In the first half of this work Geruson develops these  
concepts showing that the key to successful market strategy is the exploitation of two dimensional market heterogeneity a  
new idea that integrates and enhances the concepts of product differentiation price discrimination market segmentation  
information signalling and customer purchase risk reduction The second half follows with applications to these concepts in  
regard to the mainframe computer industry In depth examples from IBM and niche computer companies Cray Tandem and  
Control Data show how to practically implement the ideas and provide many lessons on the hidden pitfalls and secrets to  
success in market strategy The book derives from Geruson s dissertation at Oxford University and has been augmented by his
