*GeoVadis* Ashish Juneja, Anil Joseph, Dasaka S. Murty, 2026-03-26 This book contains a prolific compilation of research on geotechnical engineering presented at the First Geotech Asia International Conference GAIC 2025. The papers reflect dynamic engagement of researchers, engineers, and professionals from all over Asia to offer insights into ongoing developments and applied problem solving. This publication brings together contributions across 19 technical themes including cold region geotechnics, deep excavations, earthquake engineering, foundation systems, and underground construction. It also delves into artificial intelligence and machine learning applications, environmental and transportation geotechnics, site characterisation, slope stability, embankments, and dams, and ground improvement techniques. It is intended for academics, practising engineers, consultants, contractors, industry professionals, government authorities, and students involved in geotechnical research, education, and design and implementation. The Open Access version of this book is available at <http://www.taylorfrancis.com> and has been made available under a Creative Commons Attribution Non-Commercial No Derivatives (CC BY-NC-ND 4.0) license.

*Rock Mechanics & Strata Control* A.J.S. (Sam) Spearing, T.R. (Todd Ray) Kostecki, 2025-09-30 *Rock Mechanics Strata Control: Theory, Practice, and Application* serves as a practical guide for examining many of the fundamental and applied aspects of rock mechanics and strata control needed to help ensure safe and effective surface and underground mining. Clearly written and comprehensive in scope, the book includes numerous worked examples to elaborate on how to interpret and use the rock mechanics and support principles presented. It also includes fundamental coverage of major aspects of the topic that students and practitioners would find useful. The book is aimed primarily as a teaching and reference book for students in mining engineering and other associated disciplines such as civil engineering, geotechnical, and geological engineering, and geology. It would also be useful for practitioners working in the industry as a reference showing numerous practical application examples. Focuses on rock mechanics and strata control from a green and sustainable point of view. Includes numerous examples and case studies showing how to apply concepts and formula.

**Analysis, Design and Construction of Foundations** Yung Ming Cheng, Chi Wai Law, Leilei Liu, 2021-02-21 *Analysis, Design and Construction of Foundations* outlines methods for analysis and design of the construction of shallow and deep foundations with particular reference to case studies in Hong Kong and China, as well as a discussion of the methods used in other countries. It introduces the main approaches used by geotechnical and structural engineers and the precautions required for planning, design, and construction of foundation structures. Some computational methods and computer programmes are reviewed to provide tools for performing a more realistic analysis of foundation systems. The authors examine in depth the methods used for constructing shallow foundations, deep foundations, excavation and lateral support systems, slope stability analysis, and construction and ground monitoring for proper site management. Some new and

innovative foundation construction methods are also introduced It is illustrated with case studies of failures and defects from actual construction projects Some advanced and modern theories are also covered in this book This book is more targeted towards the understanding of the basic behavior and the actual construction of many geotechnical works and this book is not dedicated to any design code or specification though Euro codes and Hong Kong code are also used in this book for illustration It is ideal for consulting geotechnical engineers undergraduate and postgraduate students
