**Requirements-led Project Management** Suzanne Robertson,James Robertson,2005 Requirements are a crucial ingredient of any successful project This is true for any product software hardware consumer appliance or large scale construction You have to understand its requirements what is needed and desired if you are to build the right product Most developers recognize the truth in this statement even if they don t always live up to it Far less obvious however is the

contribution that the requirements activity makes to project management Requirements along with other outputs from the requirements activity are potent project management tools In Requirements Led Project Management Suzanne and James Robertson show how to use requirements to manage the development lifecycle They show program managers product and project managers team leaders and business analysts specifically how to Use requirements as input to project planning and decision making Determine whether to invest in a project Deliver more appropriate products with a quick cycle time Measure and estimate the requirements effort Define the most effective requirements process for a project Manage stakeholder involvement and expectations Set requirements priorities Manage requirements across multiple domains and technologies Use requirements to communicate across business and technological boundaries In their previous book Mastering the Requirements Process the Robertsons defined Volere their groundbreaking and now widely adopted requirements process In this second book they look at the outputs from the requirements process and demonstrate how you can take advantage of the all important links between requirements and project success
