Viewpoint-based Flexible Information System Architectures Dmitri Valeri Panfilenko, 2021-06-07 Information system architecture ISA specification as a part of software engineering field has been an information systems research topic

since the 60 s of the 20th century There have been manifold specification methodologies over the recent decades developed newly or adapted in order to target the domains of software modelling legacy systems steel production and automotive safety Still there exist considerable issues constituting the need for a flexible ISA development e g incomplete methodology for requirements in model driven architectures lacking qualitative methods for thorough definition and usage of viewpoints Currently existing methods for information system architecture specification usually de vise the target architectures either addressing only a part of software life cycles or neglect ing less structured information The method for flexible information system architectures FISA specification uses the viewpoint concept for mediating the domain expert and technical system levels The FISA method defines construction and application reference models based on the ANSI IEEE Standard 1471 2000 viewpoints with model transfor mations based on OMG Standard Model Driven Architecture MDA and four different approaches for ISA specification thus providing for flexibility both in construction and refactoring procedures The development of FISA method has been based on a thorough analysis of the ISA specification method field and constructs a comprehensive procedure and reference engi neering models for flexible ISA specification The genericity of the conceived construction and application procedure models of FISA allows for its usage not only in research but also in industry settings as presented on illustrative scenarios in steel manufacturing and automotive safety

Requirements Engineering
Gerald Kotonya,Ian Sommerville,1998-09-16 Requirements Engineering Processes and Techniques Why this book was written The value of introducing requirements engineering to trainee software engineers is to equip them for the real world of

software and systems development What is involved in Requirements Engineering As a discipline newly emerging from software engineering there are a range of views on where requirements engineering starts and finishes and what it should encompass This book offers the most comprehensive coverage of the requirements engineering process to date from initial requirements elicitation through to requirements validation How and Which methods and techniques should you use As there is no one catch all technique applicable to all types of system requirements engineers need to know about a range of different techniques Tried and tested techniques such as data flow and object oriented models are covered as well as some promising new ones They are all based on real systems descriptions to demonstrate the applicability of the approach Who should read it Principally written for senior undergraduate and graduate students studying computer science software engineering or systems engineering this text will also be helpful for those in industry new to requirements engineering Accompanying Website <http://www.comp.lancs.ac.uk/computing/resources/re> Visit our Website <http://www.wiley.com/college/wws>
