Strobl, 2013-09-05 Master s Thesis from the year 2013 in the subject Electrotechnology grade 1 0 University of Applied Sciences Regensburg Fakult t Elektro und Informationstechnik language English abstract Virtualization has come a long way since its beginnings in the 1960s Nowadays Virtual Machine Monitor VMM or hypervisor based virtualization of servers is the de facto standard in data centers In recent years virtualization has also been adopted to embedded devices such as avionics systems and mobile phones The first mass deployment of embedded virtualization can probably be seen in video game consoles though However the functionalities and possibilities provided by embedded virtualization today for the most part still are where they were when virtualization was in its infancy in the mainframe era Moreover it is still not employed by automotive electronics at all thus far This thesis presents advancements achieved in hardware virtualization since then as well as their possible merits for embedded virtualization The emphasis hereby lies on increases in reliability of the resulting embedded systems Additionally the focus is on automotive Electronic Control Units ECUs and especially the upcoming automotive domain controller architecture This work is divided into five parts The first one constitutes an introduction to the problem domain and highlights benefits of virtualizing embedded devices in particular Domain Controller Units DCUs i e server variants of ECUs beyond the mere partitioning into time and space In the second part an overview of virtualization

technology centered around its basic principles is given Against this background complications of virtualizing Input Output I O operations with current hardware architectures and the adaption of their processors to virtualization are elaborated on Moreover the most prominent implications for security as well as requirements and specialties encountered in the context of embedded virtualization are discussed The third chapter then summarizes embedded virtualization solutions found on today's market Besides it details hypervisor techniques resembling the state of the art for servers In the fourth part concepts for enhancing reliability in some aspects also availability through virtualization and eventually the approach proposed for reliable embedded systems are depicted Finally the fifth chapter presents the demonstrator foremost a technology preview of the latter built as part of working on this thesis
