

## CHAPTER 5: PROBABILITY

### QUESTION 1

You apply for graduate trainee positions at two companies. Let event  $A$  represent receiving an offer from the first company. Let event  $B$  represent receiving an offer from the second company.

- Explain why events  $A$  and  $B$  are not exhaustive.
- Explain why events  $A$  and  $B$  are not mutually exclusive.

### MEMO:

- Events are considered exhaustive if they include all outcomes in the sample space. Events  $A$  and  $B$  are not exhaustive because you may not get an offer from either firm.
- Events are mutually exclusive if they do not share any common outcome of an experiment. Events  $A$  and  $B$  are not mutually exclusive because you may get an offer from both firms. Both events can occur together, therefore, they are not mutually exclusive.

### QUESTION 2

The probability that project  $A$  will be completed on time is 0.40 and that project  $B$  will be completed on time is 0.60. Further, if project  $B$  is completed on time, the probability that project  $A$  will also be completed on time is 0.50

- What is the probability that at least one of the projects will be completed on time?
- Are events  $A$  and  $B$  mutually exclusive? Explain.

### MEMO:

Event  $A$  = Project  $A$  completion

Event  $B$  = Project  $B$  completion

$$P(A) = 0.40$$

$$P(B) = 0.60$$

$$P(A|B) = 0.50 \text{ (Project } A \text{ is completed on time given that Project } B \text{ is completed on time)}$$

**Statistics of Earth Science Data** Graham J. Borradaile,2013-11-11 The Goals of Data Collection and Its Statistical Treatment in the Earth Sciences The earth sciences are characterised by loose and complex relationships between variables and the necessity to understand the geographical distribution of observations as well as their frequency distribution Our frequency distributions and the looseness of relationships reflect the complexity and intrinsic natural variation in nature more than measurement error Furthermore earth scientists cannot design experiments according to statistical recommendation because the availability and complexity of data are beyond our control Usually the system we are studying cannot be isolated into discrete independent variables These factors influence the first steps of research how and where to collect specimens or observations Some issues are particularly troublesome and common in earth science but are rarely handled in an undergraduate statistics course These include spatial sampling methods orientation data regionalised variables time series identification of cyclicity and pattern discrimination multivariate systems lurking variables and constant sum data It is remarkable that most earth science students confront these issues without formal training or focused consideration
