Probability in Social Science S. Goldberg,2012-12-06 Birkhauser Boston Inc will publish a series of carefully selected mono graphs in the area of mathematical modeling to present serious applications of mathematics for both the undergraduate and the professional audience Some of the monographs to be selected and published will appeal more to the professional mathematician and user of mathematics serving to familiarize the user with new models and new methods Some like the present monograph will stress the educational aspect and will appeal more to a student audience either as a textbook or as additional reading We feel that this first volume in the series may in itself serve as a model for our program Samuel Goldberg attaches a high priority to teaching stu dents the art of modeling that is to use his words the art of constructing useful mathematical models of real world phenomena We concur It is our strong conviction as editors that the connection between the actual problems and their mathematical models must be factually plausible if not actually real As this first volume in the new series goes to press we invite its readers to share with us both their criticisms and their constructive suggestions

Handbook of Statistical Distributions with Applications K. Krishnamoorthy,2006-06-19 In the area of applied statistics scientists use statistical distributions to model a wide range of

practical problems from modeling the size grade distribution of onions to modeling global positioning data To apply these probability models successfully practitioners and researchers must have a thorough understanding of the theory as well as a

Basic Techniques in Environmental Simulation Roger Carter Whiton, Emil M. Berecek, 1982 Environmental simulation modeling is defined as the generation of synthetic weather observations and forecasts by use of mathematical statistical models Basic concepts in environmental simulation modeling are described with emphasis on underlying statistical fundamentals stochastic processes and Markov processes Four principle environmental simulation models and their application are described in detail The treatment begins with the single variable single station model V1S1 and is extended to the two variable single station model V2S1 The multivariate triangular matrix model MULTRI is then discussed that model is capable of generating vectors of N correlated variables A case study is presented showing the application of MULTRI to modeling point sky cover distributions at station pairs or at a single station for N lag times The most complex model in the series of four is the 2 dimensional field simulation model 2DFLD capable of producing spatially correlated synthetic two dimensional fields or networks or variables Statistical methods used in developing environmental simulation models are described with particular emphasis placed on how to fit probability distribution functions to weather variables *Modern*

Bank Valuation and Value-Based Management: Deposit and Loan Pricing, Performance Evaluation, and Risk Management Jean Dermine, 2009-09 Bank Valuation Value Based Management provides bankers bank regulators auditors and risk managers with foundational concepts and practical tools for effectively managing a bank An expert in asset and liability management European financial markets and banking theory Jean Dermine provides rigorous foundations to discuss asset and liability management at a global level with an integrated focus on an institution's banking book He covers bank valuation fund transfer pricing deposit and loan pricing risk management and performance measurement and addresses two high profile issues for banks worldwide portfolio credit risk and liquidity risk This thorough and innovative guide presents insightful coverage on the hazards of measuring portfolio credit risk the impact of liquidity risk on fund transfer pricing and the practice of performance measurement in the banking industry Numerous real world examples from the U S subprime crisis help illustrate the nature and dynamics of these issues Inside you will find a framework for discussing such managerial issues as Bank valuation Fund transfer pricing Deposit pricing Capital management Loan pricing and provisioning Securitization Measurement of interest rate risk Performance measurement At the same time that it helps readers develop an intuitive sense for asset liability management this practical book follows through with rigorous mathematical formulas and examples from the international banking community In addition exercises are incorporated throughout the text to facilitate discussions of how theoretical concepts can be applied to real world problems This authoritative guide to bank management also features an exclusive companion Web site www.mhprofessional.com/bankvaluation which includes additional chapters and exercise solutions that serve as key supplements

to the core text Creating value in banking depends on a rocksolid understanding of what drives value and the right valuation model to help make the tough decisions that will enhance shareholder value Bank Valuation Value Based Management is your one stop reference for each of these critical issues

Statistics for Engineering and the Sciences William Mendenhall, Terry Sincich, 2007 This text is designed for a two semester introductory course in statistics for students majoring in engineering or any of the physical sciences Inevitably once these students graduate and are employed they will be involved in the collection and analysis of data and will be required to think critically about the results Consequently they need to acquire knowledge of the basic concepts of data description and statistical inference and familiarity with statistical methods they are required to use on the job

Statistics for the Social Sciences Rand R. Wilcox, 1996 This book not only provides a simple description of the basic concepts and principles of statistical analysis for the social sciences it also points to failures of methods and offers ways to correct such problems For example it was once thought that standard hypothesis testing procedures for means have relatively high power under nonnormality Many studies have since demonstrated that power can be very low even with very slight departures from normality This book explains how and why such departures can occur Statistics for the Social Sciences goes beyond the typical introductory material on probability and statistical inference to incorporate modern topics of critical importance in social science research The text includes coverage of such topics as robust methods for comparing measures of location modern regression techniques recent developments associated with heteroscedastic procedures the latest developments in nonparametric statistics and a full chapter on multiple comparison procedures The accompanying disk contains more than 150 easy to use Minitab macros that provide the student with state of the art statistical methods not available in standard statistical packages Once the data are read into Minitab a single command provides access to more powerful more flexible and more accurate statistical procedures Extensive use of real data in examples and exercises Includes a disk with 150 Minitab macros for all the modern nonstandard procedures Explains why certain methods might fail and what to do to correct such problems Provides exercises at the end of each chapter
