

## Chapter 27 Lab Activity Retrograde Motion Of Mars Answers

Download

Multiple Choice: For each question, choose the letter. 27-1. The apparent retrograde motion of Mars happens just before and after opposition. We can determine when a planet turns back to its regular path because the positions of the planets relative to the stars are predictable. We can compare our position with many of the stars and identify our location.

27-2. In the chapter 27-1 we saw that retrograde motion of Mars happens at both leading and trailing conjunctions of the planet Mars relative to Earth. At both leading and trailing conjunctions, the planet Mars is behind Earth. This is why you always see the planet Mars at the same position from Earth.

Short Answer:

- 1. The planet Mars is behind Earth.
- 2. It is behind us every time we see it. (Partial only)
- 3. I cannot see anything at all. None of the planets.
