Fluids are substances that flow and take the shape of the container. They are divided into liquids and gases. Liquids have a fixed volume but no fixed shape, while gases have neither a fixed volume nor a fixed shape.

The continuity equation states that the mass flow rate is constant throughout a pipe. It is expressed as $\rho_1 A_1 v_1 = \rho_2 A_2 v_2$, where ρ is the density, A is the cross-sectional area, and v is the velocity of the fluid.

Numerical Heat Transfer and Fluid Flow Suhas Patankar,2018-10-08 This book focuses on heat and mass transfer fluid flow chemical reaction and other related processes that occur in engineering equipment the natural environment and living organisms Using simple algebra and elementary calculus the author develops numerical methods for predicting these processes mainly based on physical considerations Through this approach readers will develop a deeper understanding of the underlying physical aspects of heat transfer and fluid flow as well as improve their ability to analyze and interpret computed results

Fundamentals of Computational Fluid Dynamics Clovis R. Maliska,2023-01-19 This book presents the developments of the finite volume method applied to fluid flows starting from the foundations of the method and reaching the latest approaches using unstructured grids It helps students learn progressively creating a strong background on CFD The text is divided into two parts The first one is about the basic concepts of the finite volume method while the second one presents the formulation of the finite volume method for any kind of domain discretization In the first part of the text for the sake of simplicity the developments are done using the Cartesian coordinate system without prejudice to the complete understanding The second part extends this knowledge to curvilinear and unstructured grids As such the book contains material for introductory courses on CFD for under and graduate students as well as for more advanced students and researchers
