**Explainable Artificial Intelligence Based on Neuro-Fuzzy Modeling with Applications in Finance** Tom

Rutkowski,2021-06-07 The book proposes techniques with an emphasis on the financial sector which will make recommendation systems both accurate and explainable The vast majority of AI models work like black box models However in many applications e.g. medical diagnosis or venture capital investment recommendations it is essential to explain the rationale behind AI systems decisions or recommendations Therefore the development of artificial intelligence cannot ignore the need for interpretable transparent and explainable models First the main idea of the explainable recommenders is outlined within the background of neuro-fuzzy systems In turn various novel recommenders are proposed each characterized by achieving high accuracy with a reasonable number of interpretable fuzzy rules The main part of the book is devoted to a very challenging problem of stock market recommendations An original concept of the explainable recommender based on patterns from previous transactions is developed it recommends stocks that fit the strategy of investors and its recommendations are explainable for investment advisers
