Handbook of Income Inequality Measurement Jacques Silber,2012-12-06

Amartya Sen Equality I spoke the word As if a wedding vow Ah but I was so much older then I am younger than that now Thus sang Bob Dylan in 1964 Approbation of equality varies not only with our age though it is not absolutely clear in which direction the values may shift over one s life time but also with the spirit of the times The 1960s were good years for singing in praise of equality The spirit of the present times would probably be better reflected by melodies in admiration of the Federal Reserve System And yet the technical literature on the evaluation and measurement of economic inequality has grown remarkably over the last three decades Even as actual economic policies especially in North America and Europe have tended to move towards focusing on virtues other than the avoidance of economic inequality the professional literature on assessing and gauging economic inequality has taken quite a jump forward A great many different problems have been addressed and effectively sorted out and new problems continue to be posed and analyzed The Contents A Review Jacques Silber has done a great service to the subject by producing this collection of admirablyhelpful and illuminating papers on different aspects of the measurement of income inequality The reach of this collection is quite remarkable Along with a thorough overview from the editor himself the major areas in this complex field have been carefully examined and accessibly discussed

Making Sense of Chaos J Doyne Farmer,2024-08-06 From a pioneer in the field of complexity science and chaos theory a plan for solving the world s most pressing problems Farmer convincingly argues that by using big data and today s more powerful computers we can build more realistic models and simulations of the global economy Farmer s vision will undoubtedly be significant in how economics evolves Tej Parikh Financial Times Best New Books on Economics Both a manifesto for a revolution in economics and a memoir of an unusual career Ed Ballard Wall Street Journal We live in an age of increasing complexity an era of accelerating technology and global

interconnection that holds more promise and more peril than any other time in human history The fossil fuels that have powered global wealth creation now threaten to destroy the world they helped build Automation and digitization promise prosperity for some unemployment for others Financial crises fuel growing inequality polarization and the retreat of democracy At heart all these problems are rooted in the economy yet the guidance provided by economic models has often failed Many books have been written about J Doyne Farmer and his work but this is the first in his own words It presents a manifesto for how to do economics better In this tale of science and ideas Farmer fuses his profound knowledge and expertise with stories from his life to explain how we can bring a scientific revolution to bear on the economic conundrums facing society Using big data and ever more powerful computers we are now able for the first time to apply complex systems science to economic activity building realistic models of the global economy The resulting simulations and the emergent behavior we observe form the cornerstone of the science of complexity economics allowing us to test ideas and make significantly better economic predictions to better address the hard problems facing the world
