Process Mining

Discovery, Conformance and Enhancement of Business Processes

More and more information about business processes is recorded by information systems in the form of so-called "event logs". Despite the omnipresence of such data, most organizations diagnose problems based on factors rather than facts. Process mining is an emerging discipline based on process model-driven approaches and data mining. It not only allows organizations to fully benefit from the information stored in their systems, but it can also be used to check the conformance of processes, detect bottlenecks, and predict execution problems.

Wil van der Aalst delivers the first book on process mining. It aims to be self-contained while covering the entire process mining spectrum from process discovery to operational support. In Part I, the author provides the basics of business process modeling and data mining necessary to understand the remainder of the book. Part II focuses on process discovery as the most important process mining task. Part III moves beyond discovering the correct flow of processes and highlights conformance checking, and organizational and user perspectives. Part IV guides the reader in successfully applying process mining in practice, including an introduction to the widely used open source tool ProM. Finally, Part V takes a step back, reflecting on the material presented and the key open challenges.

Overall, the book provides a comprehensive overview of the state of the art in process mining. It is intended for business process analysts, business consultants, process managers, graduate students, and BPM researchers.

Features and Benefits

- First book on process mining, bridging the gap between business process modeling and business intelligence
- Written by one of the most influential and most cited computer scientists and the best known BPM researcher
- Self-contained and comprehensive overview for a broad audience in academia and industry
- The reader can put process mining into practice immediately due to the applicability of the techniques and the availability of the open source process mining software ProM.

Process Mining Springer:

Process Mining Wil M. P. van der Aalst, 2016-04-15 This is the second edition of Wil van der Aalst's seminal book on process mining which now discusses the field also in the broader context of data science and big data approaches. It includes several additions and updates, e.g., on inductive mining techniques, the notion of alignments, a considerably expanded section on software tools, and a completely new chapter of process mining in the large. It is self-contained while at the same time covering the entire process mining spectrum from process discovery to predictive analytics. After a general introduction to data science and process mining in Part I, Part II provides the basics of business process modeling and data mining necessary to understand the remainder of the book. Next, Part III focuses on process discovery as the most important process mining task, while Part IV moves beyond discovering the control flow of processes, highlighting conformance checking and organizational and time perspectives. Part V offers a guide to successfully applying process mining in practice, including an introduction to the widely used open source tool ProM and several commercial products. Lastly, Part VI takes a step back, reflecting on the material presented and the key open challenges. Overall, this book provides a comprehensive overview of the state of the art in process mining. It is intended for business process analysts, business consultants, process managers, graduate students, and BPM researchers.

Handbook on Digital Twin and Artificial Intelligence Techniques for Rail Applications Maksym Spiryagin, Stefano Bruni, Colin Cole, 2025-06-17 With contributions from experts from around the world, this handbook aims to systemize the existing experience and knowledge that can be used in the development of more efficient and controlled railway systems. As a result, this handbook showcases the modern methods, methodologies, and frameworks for the development of DT and AI architectures and apparatus in the area of the existing railway systems and transport engineering tasks. The chapters cover such varied and specialized topics as the processes related to the transformation of a physical twin into a digital twin, the application of data-driven and physics-based simulation approaches in the development of digital twins, asset management application tasks with the implementation of DT and AI, and the experimental and field applications of the DT and AI concepts and technologies in railway transport system design and predictive maintenance tasks. **Handbook on Digital Twin and Artificial Intelligence Techniques for Rail Applications** is essential reading for engineers, practitioners, and researchers involved in the development of railway transport and transit systems.

Conformance Checking and Diagnosis in Process Mining Jorge Munoz-Gama, 2016-11-22 Process mining techniques can be used to discover, analyze, and improve real processes by extracting models from observed behavior. The aim of this book is conformance checking, one of the main areas of process mining. In conformance checking, existing process models are compared with actual observations of the process in order to assess their quality. Conformance checking techniques are a way to visualize the differences between assumed process represented in the model and the real process in the event log, pinpointing possible problems to address and the business process management results that rely on these

models This book combines both application and research perspectives It provides concrete use cases that illustrate the problems addressed by the techniques in the book but at the same time it contains complete conceptualization and formalization of the problem and the techniques and through evaluations on the quality and the performance of the proposed techniques Hence this book brings the opportunity for business analysts willing to improve their organization processes and also data scientists interested on the topic of process oriented data science
