The Role of Advanced Engineering Simulation in Model-based Design, 1995 The agile manufacturing paradigm engenders many new concepts and work approaches for manufacturing operations. A technology often invoked in the concept of agility is modeling and simulation. Few would disagree that modeling and simulation holds the potential to substantially reduce the product development cycle and lead to improve product reliability and performance. Advanced engineering simulation can impact manufacturing in three areas process design product design and process control. However despite that promise the routine utilization of modeling and simulation by industry within the design process is very limited. Advanced simulation is still used primarily in a troubleshooting mode examining design or process problems after the fact. Sandia National Laboratories has been engaged in the development of advanced engineering simulation tools for many years and more recently has begun to focus on the application of such models to manufacturing processes important for the defense industry. These efforts involve considerable interaction and cooperative research with US industry. Based upon this experience this presentation examines the elements that are necessary for advanced engineering simulation to become an integral part of the design process.

CITA Complex Modelling Mette Ramsgaard Thomsen, 2021-01-15 CITA Complex Modelling investigates the infrastructures of architectural design models. By questioning the tools for integrating information across the expanded digital design chain the book asks how to support feedback between different scales of design engagement moving from material design across design simulation and analysis to specification and fabrication. The book conveys the findings of the Complex Modelling research project a five year framing project supported by the Independent Research Fund Denmark. Undertaken at CITA the Centre for Information Technology and Architecture The Royal Danish Academy of Fine Arts School of Architecture. Complex Modelling asks how new interdisciplinary methods for adaptive parametrisation advanced simulation machine learning and robotic fabrication

can be orchestrated within novel workflows that expand the agency of architecture
