David Bernstein

Part One: The rationale for the significance of other chord successions, in addition to circle progressions.

In the early edition of *Music in Theory and Practice*, authors Bruce Benne and Jeffrey Miller claim that “all chord successions from the beginning of the 16th century to the middle of the 18th century, perfect systems or not, are fundamentally circle progressions.”¹ They then outline a system of circle-theory “succession analysis” to relate circle progressions to readily identified Latin names for chords (e.g., *tertium* and *quartum*), and argue that one need not rely upon traditional harmonic progression for measurement by descending thirds or ascending fourths. With circle analysis, one can see at a glance a wealth of relationships connecting four-chord successions, “Prohibition” and “inverted progression” are readily seen, as are circle progressions involving all seven diatonic triads. The book is useful as the reader often is able to derive meaning from a few circle progressions as well as analyzing a text.

However, as Bennett and Miller affirm, the concept of progression began to encompass other chord relationships, particularly those without steps, after their work. The study of circle theory was complicated by allowing that non-step relationships and non-progression be valid. Specifically, the non-progression to dominant triads and other types of chord successions as their relationships, “backward motion,” were sometimes considered acceptable and even measured by seconds. The circle progression measured the strongest version of harmonic movement but non-progression showed relationships, especially chromatic third relations (e.g., *tertium* to *tertium tertium*), and so on.

Harmony is considered “*harmonic*” (i.e., progression-oriented) as well as non-progression-oriented (i.e., “circle progression”) and the two different types of describing events in the course of the composition, and their potential contrast. But it is possible that they be viewed after Benjamin Lerner’s theory published for composition (Bennett and Miller
