Science, Technology, and Warfare Monte D. Wright, Lawrence J. Paszek, 1971 The nature of warfare has always been largely determined by contemporary technology Instances of technological change undertaken for the sake of military advantage have also been relatively common in history The relationships between science and warfare however have been much more variable and ambiguous The papers and discussions of the Symposium investigate selected aspects of the complex relationships between science and technology on the one hand and warfare on the other from the Renaissance to the 1960s In the first session Professor Hall takes up in turn the possible areas of interaction between science exterior ballistics engineering explosives mechanics and metallurgy and military technology edge weapons cannons and mortars fortification and siege warfare and small arms in the 15th 16th and 17th centuries The notion that science is pursued for utilitarian ends Hall finds is an unhistorical projection backward from our own age He excludes navigation and medicine from consideration because they were civil as well as military concerns In spite of the pleading of certain early propagandists of the Empire of Man over Nature and in spite of the elaborate sketches of military engines in Leonardo's notebooks military technology was largely innocent of scientific method The developments in fortification required mathematical skills but nothing more than elementary geometry and arithmetic Mathematicians studied the ancient problem of the trajectory of projectiles but their efforts affected neither the design nor the use of guns The range tables they provided were not even usable with the guns of the time The solution of the trajectory problem would await Benjamin Robins and the 18th century Professor Hale supports Hall's conclusion with three arguments In the 16th and 17th centuries armies were so organized as to preclude any productive contact with the worlds of science and technology

Scientific Knowledge and Its Social Problems Jerome R. Ravetz, 2020-09-10 Science is continually confronted by new and difficult social and ethical problems Some of these problems have arisen from the transformation of the academic science of the prewar period into the industrialized science of the present Traditional theories of science are now widely recognized as obsolete In *Scientific Knowledge and Its Social Problems* originally published in 1971 Jerome R. Ravetz analyzes the work of science as the creation and investigation of problems He demonstrates the role of choice and value judgment and the inevitability of error in scientific research Ravetz's new introductory essay is a masterful statement of how our understanding of science has evolved over the last two decades

Candid Science IV Magdolna Hargittai, István Hargittai, 2004 *Candid Science IV Conversations with Famous Physicists* contains 36 interviews with well known physicists including 20 Nobel laureates Templeton Prize winners Wolf Prize winners and other luminaries Physics has been one of the determining fields of science in the past 100 years playing a conspicuous role not only in science but also in world politics and economics These in depth conversations provide a glimpse into the greatest achievements of physics during the past few decades featuring stories of the discoveries and showing the human drama behind them The greatest physicists are brought into close human proximity as if readers were having a conversation with them The interviewees span a wide range of scientists from such early giants as Eugene Wigner and Mark Oliphant to members of the youngest generation such as the 2001 Nobel laureate Wolfgang Ketterle The list includes famous personalities of our time such as Steven Weinberg Leon Lederman Norman Ramsey Edward Teller John Wheeler Mildred Dresselhaus Maurice Goldhaber Benoit Mandelbrot John Polkinghorne and Freeman Dyson

The Logical Leap David Harriman, 2010-07-06 A groundbreaking solution to the problem of induction based on Ayn Rand's theory of concepts Inspired by and expanding on a series of lectures presented by Leonard Peikoff David Harriman presents a fascinating answer to the problem of induction the epistemological question of how we can know the truth of inductive generalizations Ayn Rand presented her revolutionary theory of concepts in her book *Introduction to Objectivist Epistemology* As Dr Peikoff subsequently explored the concept of induction he sought out David Harriman a physicist who had taught philosophy for his expert knowledge of the scientific discovery process Here Harriman presents the result of a collaboration between scientist and philosopher Beginning with a detailed discussion of the role of mathematics and experimentation in validating generalizations in physics looking closely at the reasoning of scientists such as Galileo Kepler Newton Lavoisier and Maxwell Harriman skillfully argues that the inductive method used in philosophy is in principle indistinguishable from the method used in physics

Science, Technology, and Warfare Monte D. Wright, Lawrence J. Paszek, 2001 This book originally published in 1969 discusses the development of the complex relationships between science and technology and warfare from the Renaissance to the 1960s The nature of warfare has always been largely determined by contemporary technology Instances of technological change undertaken for the sake of military advantage have also been relatively common in history The relationships between science and warfare however have been much more variable and ambiguous *Science Technology and Warfare* requires a fourth term to be complete Management because the primary military innovator never has been the scientist technologist or soldier but rather the administrative organizer of victory
