Lay, 2023 A student's first encounter with analysis has been widely regarded as one of the most difficult courses in the undergraduate mathematics curriculum This is a result of the complexity of the topics as well as to what the student is asked to do with them After years of

emphasizing computation with only a brief diversion in high school geometry the student is now expected to be able to read understand and actually construct mathematical proofs Unfortunately often very little groundwork has been laid to explain the nature and techniques of proof This text seeks to aid students in their transition to abstract mathematics in two ways by providing an introductory discussion of logic and by giving attention throughout the text to the structure and nature of the arguments being used The first five editions have been praised for their readability and their student oriented approach This revision builds on those strengths *The British National Bibliography* Arthur James Wells,2006 *The British Library General Catalogue of Printed Books, 1986 to 1987* British Library,1988 **Choice** ,1987 **Subject Guide to Books in Print** ,2001 **The Cumulative Book Index** ,1990 A world list of books in the English language
