Flight to the Future National Research Council, Division of Behavioral and Social Sciences and Education, Board on Human-Systems Integration, Panel on Human Factors in Air Traffic Control Automation, 1997-01-28

Despite the strong safety record of the national airspace system serious disruptions occasionally occur often as a result of outdated or failed equipment Under these circumstances safety relies on the skills of the controllers and pilots and on reducing the number of aircraft in the air The current and growing pressures to increase the capacity to handle a greater number of flights has led to a call for faster and more powerful equipment and for equipment that can take over some of the tasks now being performed by humans Increasing the role of automation in air traffic control may provide a more efficient system but will human controllers be able to effectively take over when problems occur This comprehensive volume provides a baseline of knowledge about the capabilities and limitations of humans relative to the variety of functions performed in air traffic control It focuses on balancing safety with the expeditious flow of air traffic identifying lessons from past air accidents The book discusses

- The function of the national airspace system and the procedures for hiring training and evaluating controllers
- Decisionmaking memory alertness vigilance sleep patterns during shift work communication and other factors in controllers performance
- Research on automation and human factors in air traffic control and incorporation of findings into the system
- The Federal Aviation Administration's management of the air traffic control system and its dual mandate to promote safety and the development of air commerce

This book also offers recommendations for evaluation the human role in automated air traffic control systems and for managing the introduction of

automation into current facilities and operations It will be of interest to anyone concerned about air safety policymakers regulators air traffic managers and controllers airline officials and passenger advocates

Human Factors in Flight Instructor's Guide Craig S. Funk,2017-10-03 Designed to help the instructor to present concepts in human factors this guide is presented in lecture note format with each unit outlining performance objectives questions and answers references to pages in the main text and large print summaries for overhead projection The numbering relates to the unit questions in the Student Workbook A set of objective questions on each unit is also provided as well as prepared tests

Human Factors for Aviation ,1996 Aviation and Human Factors Jose Sanchez-Alarcos,2019-06-19 Air safety is right now at a point where the chances of being killed in an aviation accident are far lower than the chances to winning a jackpot in any of the major lotteries However keeping or improving that performance level requires a critical analysis of some events that despite scarce point to structural failures in the learning process The effect of these failures could increase soon if there is not a clear and right development path This book tries to identify what is wrong why there are things to fix and some human factors principles to keep in aircraft design and operations Features Shows through different events how the system learns through technology practices and regulations and the pitfalls of that learning process Discusses the use of information technology in safety critical environments and why procedural knowledge is not enough Presents air safety management as a successful process but at the same time failures coming from technological and organizational features are shown Offers ways to improve from the human factors side by getting the right lessons from recent events

Human Factors on the Flight Deck Hans-Joachim Ebermann,Joachim Scheiderer,2012-12-15 What is for a professional pilot required to fly as safe as possible Written by pilots the book gives a detailed introduction into the basics of accident prevention in air traffic Explicit background knowledge as well as detailed listings of safety relevant features in human behaviour are included

Martinussen,David R. Hunter,2009-09-28 While it is true that fortune favors the prepared mind in the field of aviation it may be equally true that misfortune often punishes an unprepared mind To be fully prepared pilots must have comprehensive knowledge of weather aerodynamics propulsion navigation and all the other technical disciplines However they must also have a comprehensive understanding of the component that is simultaneously the most fragile and most resilient the most unreliable and the most adaptable the human being Aviation Psychology and Human Factors explores the application of psychological principles and techniques to the specific situations and problems of aviation It provides a complete overview of the role of psychology in the field of aviation The authors address the contribution of psychology in the design of aviation systems the selection and training of pilots the psychological characteristics of pilots that may relate to aviation safety and to the behavior of passengers They cover key concepts of psychological research and data analysis at a depth that fosters a greater appreciation of how these tools are used in the development of new psychological knowledge A keener understanding of aviation psychology will better prepare pilots for the demands that aviation will make While many books cover this subject for psychologists very few if any present the material to pilots With balanced coverage that makes the material accessible to both this book makes pilots aware of the positive impact psychology and its application can have on improving aviation operations providing specific information that pilots can use in their daily operations It gives psychologists a better understanding of how their discipline is applied to aviation while giving pilots the tools to better evaluate and implement future products in the field of aviation psychology

range of subjects to be studied and in less detail than the professional syllabus this handbook covers both requirements with syllabus variations being indicated in the contents page The book is divided into four major sections containing material from psychology physiology and medicine

Human Performance on the Flight Deck Don Harris,2016-12-05 Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner this book describes the inter relationships between the various application areas of human factors recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes The relationship between areas such as pilot selection training flight deck design and safety management is continually emphasised within the book It also affirms the upside of human factors in aviation the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails The book is divided into four main parts Part one describes the underpinning science base with chapters on human information processing workload situation awareness decision making error and individual differences Part two of the book looks at the human in the system containing chapters on pilot selection simulation and training stress fatigue and alcohol and environmental stressors Part three takes a closer look at the machine the aircraft beginning with an examination of flight deck display design followed by chapters on aircraft control flight deck automation and HCI on the flight deck Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline the final chapter in this section looks at human factors for incident and accident investigation The book is written for professionals within the aviation industry both on the flight deck and elsewhere for post graduate students and for researchers working in the area

Human Error in Aviation R.Key Dismukes,2017-07-05 Most aviation accidents are attributed to human error pilot error especially Human error also greatly effects productivity and profitability In his overview of this collection of papers the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents Human factors research reveals a more accurate and useful perspective The errors made by skilled human operators such as pilots controllers and mechanics are not root causes but symptoms of the way industry operates The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient
