

SQL

SQL is a Structured Query Language used to query a Relational Database System.

Main components of SQL are Data Definition Language(DDL) , Data Manipulation Language(DML), Embedded SQL and Dynamic SQL.

SQL is Structured Query Language which is used with databases like MySQL, Oracle, Microsoft SQL Server, IBM DB2, etc. It is not a database itself.

A conventional SQL database needs to be running as a service like OracleDB to connect to and provide a lot of functionalities.

SQL is a query language which is used by different SQL databases. It is not a database itself.

SQLite

SQLite is an Embeddable Relational Database Management System which is written in ANSI-C.

SQLite supports many features of SQL and has high performance and does not support stored procedures.

SQLite is a portable database resource. We have an extension of SQLite in any language, to access that database.

SQLite database system doesn't provide such functionalities.

SQLite is a database management system itself which uses SQL.
