

Problems

Section 1.2

1.1 For the one-dimensional objects $O(x)$, and LSFs $h(x)$ shown in Figure 1.13, draw the resulting projections $I(x)$. Write down whether each object contains high spatial frequencies, low spatial frequencies, or both. Which image best represents the object, and which is the most distorted?

Solution.

In (a) the object contains only very high spatial frequencies, (b) has both very high (at the edges) and very low (the flat parts of the profile) spatial frequencies, (c) has predominantly low spatial frequencies, and (d) has both low and high spatial frequencies. Since $h(x)$ contains mainly low spatial frequencies, it will distort the object with the greatest proportion of high spatial frequencies, i.e. (a), to the greatest degree.
