Languages and Compilers for Parallel Computing Lawrence Rauchwerger, 2004-02-25 This book constitutes the thoroughly refereed post proceedings of the 16th International Workshop on Languages and Compilers for Parallel Computing LCPC 2003 held in College Station Texas USA in October 2003 The 35 revised full papers presented were selected from 48 submissions during two rounds of reviewing and improvement upon presentation at the workshop The papers are organized in topical sections on adaptive optimization data locality parallel languages high level transformations embedded systems distributed systems software low level transformations compiling for novel architectures and optimization infrastructure

Retargetable Compiler Technology for Embedded Systems Rainer Leupers, Peter Marwedel, 2013-03-09 It is well known that embedded systems have to be implemented efficiently This requires that processors optimized for certain application domains are used in embedded systems Such an optimization requires a careful exploration of the design space including a detailed study of cost performance tradeoffs In order to avoid time consuming assembly language programming during design space exploration compilers are needed In order to analyze the effect of various software or hardware configurations on the performance retargetable compilers are needed that can generate code for numerous different potential hardware configurations This book provides a comprehensive and up to date overview of the fast developing area of retargetable compilers for embedded systems It describes a large set important tools as well as applications of retargetable compilers at different levels in the design flow Retargetable Compiler Technology for Embedded Systems is mostly self contained and requires only fundamental knowledge in software and compiler design It is intended to be a key reference for researchers and designers working on software compilers and processor optimization for embedded systems

System-on-Chip Bashir M. Al-Hashimi, 2006-01-31 This book highlights both the key achievements of electronic systems design targeting SoC implementation style and the future challenges presented by the continuing scaling of CMOS technology

Low-Power Processors and Systems on Chips Christian Piguet, 2018-10-03 The power consumption of microprocessors is one of the most important challenges of high performance chips and portable devices In chapters drawn from Piguet s recently published *Low Power Electronics Design* this volume addresses the design of low power microprocessors in deep submicron technologies It provides a focused reference for specialists involved in systems on chips from low power microprocessors to DSP cores reconfigurable processors memories ad hoc networks and embedded software
