A physical property is a characteristic that can be observed without changing the identity of the substance. Mass and the properties of an object are easy to observe. For example, you can observe an object's color, texture, shape, and its weight. In general, the properties of an object are determined by the particles of the substance that make up the object.

Many of the physical properties of materials that make up objects can be measured. These properties include density, boiling point, melting point, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties than a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small a sample of material is, it has the same property or always the same
