Chapter 1 _____

Section 1.1

1.
 - i. The answer is yes because any nonempty set of positive integers has a smallest member by the Well-Ordering Principle. The smallest member is 1 because we can write 1 as $1 = 139 - 397 - 102 - 541$.
 - ii. No. If $\frac{m}{n}$ is in the set, then $\frac{m}{2n}$ is also in the set. So there is no smallest member. The Well-Ordering Principle does not apply because the set in question is not a subset of the integers.
2. Let $P(n)$ be the statement that $1 + 3 + \dots + (2n - 1) = n^2$. Then $P(1)$ is the statement that $1 = 1^2$, which is true. Now suppose that $P(n)$ is true. We prove that $P(n + 1)$ is true, namely, that $1 + 3 + \dots + (2n - 1) + (2n + 1) = (n + 1)^2$. By our induction hypothesis, we can substitute n^2 for $1 + 3 + \dots + (2n - 1)$. So we are left to prove that $n^2 + (2n + 1) = (n + 1)^2$, which is clearly true.
3. Let $n = 1$. Then $\frac{1 - r^{n+1}}{1 - r} = \frac{1 - r^2}{1 - r} = \frac{(1 - r)(1 + r)}{1 - r} = (1 + r)$ since $r \neq 1$. Assume $1 + r + r^2 + \dots + r^n = \frac{1 - r^{n+1}}{1 - r}$. Then $1 + r + r^2 + \dots + r^n + r^{n+1} = \frac{1 - r^{n+1}}{1 - r} + r^{n+1} = \frac{1 - r^{n+1}}{1 - r} + \frac{(1 - r)r^{n+1}}{1 - r} = \frac{1 - r^{n+1} + r^{n+1} - r^{n+2}}{1 - r} = \frac{1 - r^{n+2}}{1 - r}$.
4. Let $n = 1$. Then $n^3 + 2n = 3$, which is a multiple of 3. Assume $n^3 + 2n$ is a multiple of 3. We must show that $(n + 1)^3 + 2(n + 1)$ is a multiple of 3. Now $(n + 1)^3 + 2(n + 1) = n^3 + 3n^2 + 3n + 1 + 2n + 2$, which equals $(n^3 + 2n) + 3n^2 + 3n + 3$. Since $(n^3 + 2n)$ is a multiple of three, and $3n^2 + 3n + 3 = 3(n^2 + n + 1)$, $(n + 1)^3 + 2(n + 1)$ is a multiple of 3.
5. If there is one person in the room, there are 0 handshakes. Assume that if n people are in the room, there are $\frac{n(n-1)}{2}$ handshakes. If an $(n + 1)$ th person enters the room then n more handshakes will occur, making the total $\frac{n(n-1)}{2} + n$. Now $\frac{n(n-1)}{2} + n = \frac{n(n-1)}{2} + \frac{2n}{2} = \frac{n^2 - n + 2n}{2} = \frac{n^2 + n}{2} = \frac{n(n+1)}{2}$.

Abstract Algebra: A Gentle Introduction advantages a trend in mathematics textbook publishing towards smaller, less expensive and brief introductions to primary courses. The authors move away from the "everything for everyone" approach so common in textbooks. Instead they provide the reader with coverage of numerous algebraic topics to cover the most important areas of abstract algebra. Through a careful selection of topics supported by interesting applications, the authors intend the book to be used for a one semester course in abstract algebra. It is suitable for an introductory course in mathematics for majors. The text is also very suitable for education majors who need to have an introduction to the topic. As textbooks go through various editions and authors employ the suggestions of numerous well intentioned reviewers, these books become larger and larger and subsequently more expensive. This book is meant to counter that process. Here students are given a gentle introduction meant to provide enough for a course yet also enough to encourage them toward future study of the topic.

Features: Groups before rings approach. Interesting modern applications. Appendix includes mathematical induction, the well ordering principle, sets, functions, permutations, matrices and complex numbers. Numerous exercises at the end of each section. Chapter Hint and Partial Solutions offers built in solutions manual.

By incorporating technology into an abstract algebra course, this textbook approaches teaching an introductory course in abstract algebra in a new way. Either Mathematica or GAP Groups, Algorithms and Programming can be used to give students a hands on experience with groups and rings. Every chapter includes several interactive problems in which students can use these programs to explore groups and rings, giving them a better grasp of the topic. The book also contains plenty of non interactive problems, classical proofs that provide the mathematical rigor required.

It also covers advanced topics such as semi direct products polycyclic groups solving Rubik s cube like puzzles and Wedderburn s theorem
